

Service Manual

MINOLTA X-700

(2017-100/200)

MINOLTA

MINOLTA X-700 (2017-100)

(2017-200)---Black

Type of camera

Electronically controlled 35mm focal plane shutter
single lens reflex AE camera

Photography system : Program AE, aperture priority
AE, and manual photography

Standard lens : MD 50mm F1.2, MD 50mm F1.4,
MD 50 F1.7

Lens mount : Minolta SLR bayonet mount.

Film used : J135 rolled film

Size of image field : 24mm x 36mm

Shutter

Electronically controlled focal plane shutter (Traveling
horizontally)

Shutter speed : 4 sec. to 1/1000 sec. (stepless) in
auto (P and A modes).

1, 1/2, 1/4 1/8, 1/15, 1/30, 1/60,
1/125, 1/250, 1/500, 1/1000 sec. and
B (bulb) in manual mode.

Shutter dial : Click stop endless dial (with position
P/A lock).

Shutter release : Electromagnetic release, remote cord,
wireless controller IR-1 can be
mounted.

Shutter release locks in case of
battery voltage drop.

Shutter button is provided with sensor
switch. (Metering and displaying
continuous for 15 sec. after touching
the sensor switch.)

With main switch at ON)),
intermittent electronic alarm is given
to warn against camera vibration when
the shutter speed indicated in the
viewfinder becomes less than 1/30
second.

Self-timer : Electronic self-timer starts by using
the shutter button. 10 second
operation is indicated by LED blink
and intermittent electronic alarm
(with the main switch set at ON)),
Shutter pre-operation notice is given.
Self-timer operation can be cleared
after its start.

Synchro

Flash synchro : X contact, electroflash is synchro-
nized at speeds lower than 1/60 second;
flash bulb is at speeds lower than
1/15 second.

Hot shoe : Direct contact (with electric shock
prevention device), synchro auto
control contact.

Synchro terminal : JIS B type socket

Film winding, rewinding

Film winding : Single-operation lever winding at an
angle of 130° (preliminary angle 30°)
auto winding by motor 1 or auto winder
G.

Film counter : Auto resetting calculation.

Film rewinding : Auto rewind and crank system; auto
reset of rewind button.

Viewfinder

Focusing screen : Center---Split, microprism
Periphery---Acutematte

Viewfinder vision : 95% (standard 24mm x 36mm image
field)

Magnification : 0.9 (50mm standard lens at ∞)

Visibility : 1 dioptr.

Viewfinder indication : Shooting mode LED, shutter
speed scale, shutter speed
indication LED, shutter speed
non-interlock alarm LED,
exposure compensation indication
exposure compensating, LED,
set aperture valash ready
signal, FDC indication,
faulty P mode indication.

Mirror : Slide-up quick return

Exposure control

Light-Metering system :

TTL, center-weighted average
metering.

(Minolta direct metering, using auto
electroflash 280PX/CLE)

Receiver element : Silicon photocell

Auto exposure interlock range :

EV1-18 (ASA100 F1.4 lens)

Film speed scale : ASA/ISO 25-1600 (locked every
1/3 stage)

Exposure Compensation :

This is possible in the $\pm 2EV$
range of the standard (locked every
1/2 stage)

Power supply

Battery used : Two 1.5V alkaline manganese batteries (JIS LR44/A76) or 1.55V silver oxide battery G-13 type (JIS SR44) or equivalent.

Main switch : Changeover type ON))) , ON, OFF.

Metering switch : Shutter button sensor switch system.
(Battery check)

Back cover

Back cover control lift and one-touch lock system,
memo-holder with grip (film speed conversion), multi-
function back compatibility.

Others

Film signal, preview button, battery case, eyepiece
cap.

Size & weight

Size : 137mm(W) × 89mm(H) × 51.5mm(D)

Weight (body only) : 505g (less battery)

Exclusive accessories

- Multi-function back (Code No. 8744)
- Auto electro flash 280PX (Code No. 8808)

X-700 (2017-100.....Chrome model 2017-200.....Black model) Parts List

- This Parts List based upon the existing models (as of Jan. 1983, 2017-200 Black model).
- Regarding those modified in the course of production, part No. on the exploded view of the Parts List is provided with ● or ●.
- : Modified in the course of production, and individually not interchangeable with previous type.
(Some part is interchangeable)
- : Discontinued in the course of production, newly added or temporarily used.
- Regarding those provided with ● or ●, be sure to refer to the specified page (P. is provided under part No.)

For the modification details, described on P. 21 or after.

Read and understand the description on P. 21 before hand.

- This Parts List based upon X-700 (with AE lock) even though 2 types, AE lock/non AE lock, are on the market.
For X-700 with non AE lock, described on P. 35~P. 40 as exclusive parts.
- For 2017-100 (Chrome model), described on P. 20 as exclusive parts.
Parts other than on P. 20, refer to P. 1~P. 17 since those are common parts with 2017-200.
In other hand, for wiring of flexible P.C. board set of 2017-100, refer to P. 39~P. 40 since AE lock is not provided.

- このパーツリストは、現在生産中（1983年1月現在）のモデル（2017-200.....Black model）を基本にまとめてあります。

- 生産途中で変更された部品には、パーツリスト展開図側の部品番号の隣に記号（●印又は●印）を付けてあります。

●印：生産途中で変更され、その部品単独では旧タイプとの互換性がないもの
(一部互換性がある場合もあります)

●印：生産途中に廃止、新設、又は一時的に使用された部品を示す。

- ●印又は、●印が付いている部品については、必ず指示されたページを参照して下さい。
(部品番号の下に、P. と表示)

部品の変更内容は、P. 21以降に記載してあります。P. 21の説明を理解の上で利用下さい。

- X-700には、AEロック機能無しと、AEロック機能付の2種類ありますが、このパーツリストは、AEロック機能付のX-700を基本にまとめてあります。

AEロック機能無しX-700については、P. 35~P. 40に専用部品表としてまとめてあります。

- 2017-100 (Chrome model) については、Page 20に専用部品表としてまとめています。

記載以外は、2017-200と共通ですので、Page 1~Page 17を参照して下さい。

尚、2017-100には、AEロック回路が無い為、フレキシブル基板セット、リード線の配線はそれぞれPage 39, Page 40を参照して下さい。

■ Electrical parts on flexible P.C. board set

- Flexible P.C. board set with AE lock circuit, 5 types (2017-0401-81, 2017-0401-32, 2017-0401-33, 2017-0401-34, 2017-0401-35) had been assembled, however, other parts than IC3 on 0401-81 are common parts.

- 0401-81 is not a service part, use IC3 (2017-4303-32) when replacing.

■ For the other type flexible P.C. board set, refer to page 30.

■ フレキシブル基板搭載の電気部品について

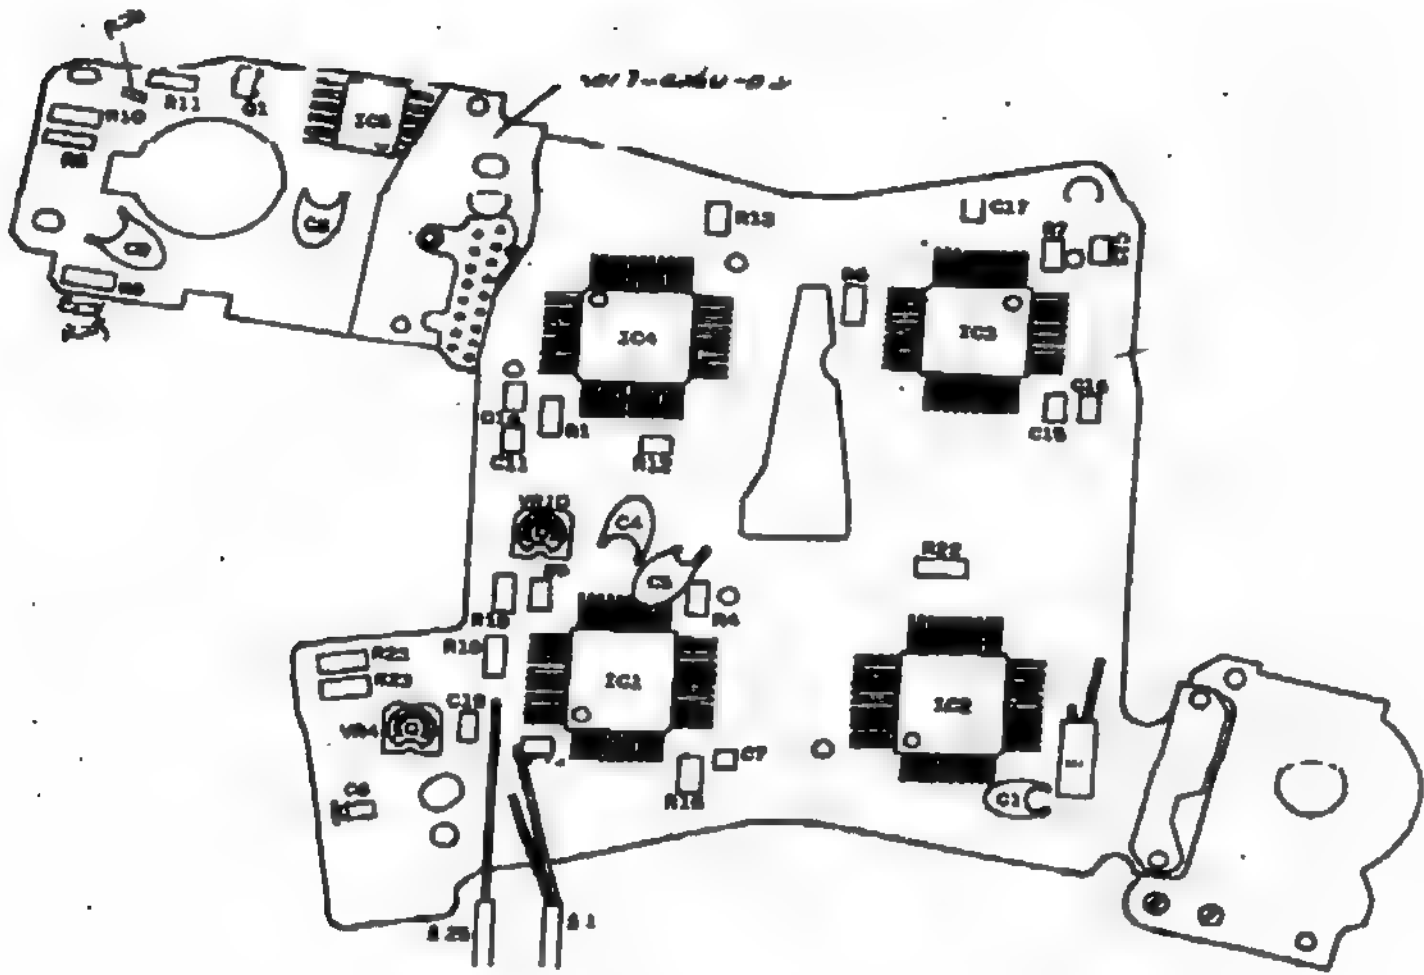

- AEロック回路付フレキシブル基板セットは、5種類 (2017-0401-81, 2017-0401-32, 2017-0401-33, 2017-0401-34, 2017-0401-35) ありますが、0401-81のIC3以外全て共通です。

- 0401-81のIC3は、部品供給しておりませんので交換時は、右表のIC3 (2017-4303-32) に交換して下さい。

■ 他の種類のフレキシブル基板については、page 30 を参照して下さい。

g1 (2017-4401-02) and g2(2017-4402-02) are supplied with specified length above as service part.

Other lead wires than g1 and g2 are supplied with meter (m) each.

g1 (2017-4401-02)、g2 (2017-4402-02) は、上記指定の長さで供給します。それ以外は、1m単位で供給します。

■Lead wires list (2017-0401-32,2017-0401-33,2017-0401-82)

*2017-0401-81, whose flexible P.C. board has own At lock circuit, has the same wirings except #55 since it has a common printed wiring. (#55 is unnecessary.)

*2017-0401-82は、AEネット回路の無いフレキシブル基板版ですが、
フレキシブル基板の長さを#55に合わせる、全て同じです。
(#55は配線しない。)

Modification of the concerning the ● or ● marked parts are mentioned in P. 1~P. 20. Carefully read explanations 1~4 beforehand.

このページ以降はP. 1~P. 20で●印、又は●印のついている部品の変更内容等について記載しています。神内1~4をよく理解の上で利用して下さい。

- 1 This type of modification is classified into Type A~B according to the frequency of modification. The differences are shown in a following diagram.
- 2 When the modification of a part also involves the modification of other parts, the related parts are listed in a column below the first in the diagram.
- 3 When there are related parts, one part cannot be replaced individually unless otherwise noted. It must be replaced as a set with the other related parts.
- 4 For those of previous type which cannot be supplied, an (X) mark is attached to the part No. If it is necessary to replace (X)-marked parts, replace them with those of another type (as a set if related parts are available).
1. 変更の回数によりType A~Bに分け、各タイプごとの違いを表の形式で記載しています
- 2 その部品単独の変更でない、関連する変更部品がある場合は表の縦の列で関連変更部品（使用可能な部品の組合わせ）を示しています
- 3 関連変更部品がある場合、記載のない限りその部品単独では交換できません。関連部品とセットであれば他のタイプに交換は可能です
- 4 旧タイプの部品で供給できない部品には、部品番号の後に(X)の印をつけてあります。(X)印の部品で交換の必要がある場合は他のタイプ、（関連部品があればセットで）交換して下さい

■ Film advance lever / 巻上レバー

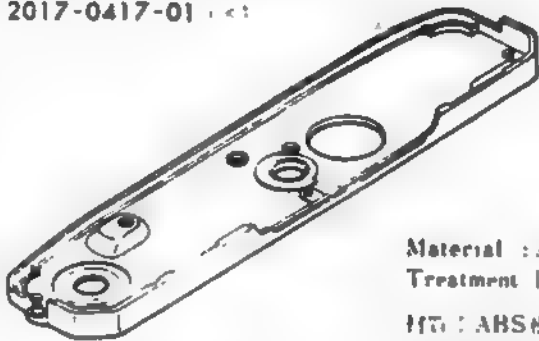

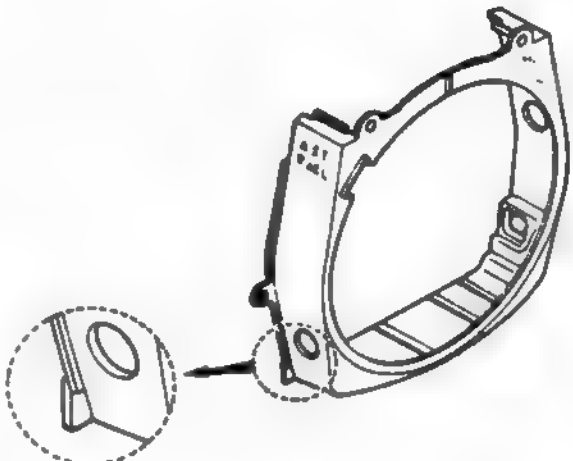

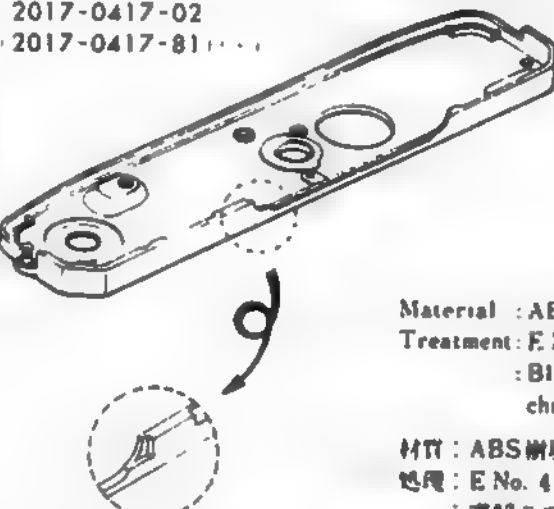

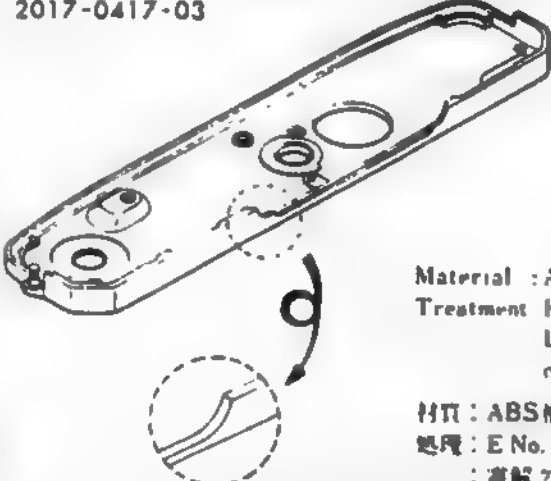

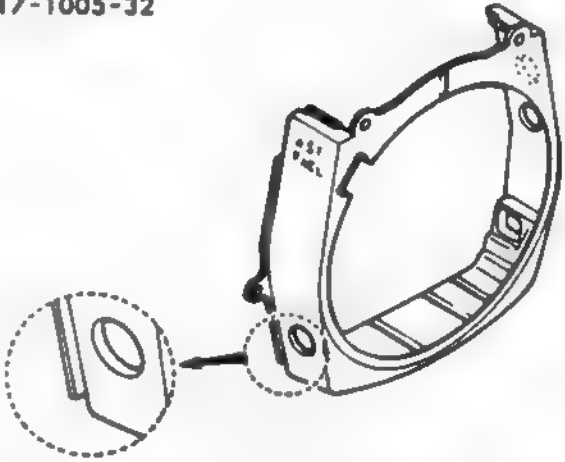

- 2017-0341-02 (Type B) can be used instead of 2017-0341-01 (Type A), however, converse using is not allowed.
- 2017-0341-02 (Type B) は、2017-0341-01 (Type A) の代りに使用可能。逆は不可。

2017-0302	Film advance lever set	巻上レバーセット
2017-0341	Winding base plate B set	巻取台板Bセット
2017-1344	Film advance lever pressure	巻上レバー押え
2017-1354	Film advance lever knob	巻上レバー指当
2019-3002		
9762-1745-07	Top lift screw	十字穴付なべ頭タノブタイトねじ
9763-1755-07	Top lift screw	十字穴付半丸皿頭タノブタイトねじ

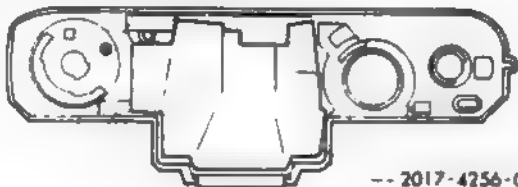

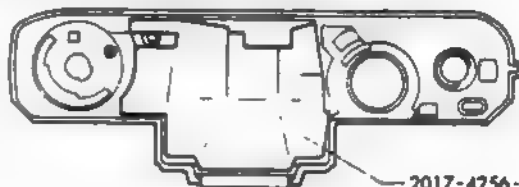

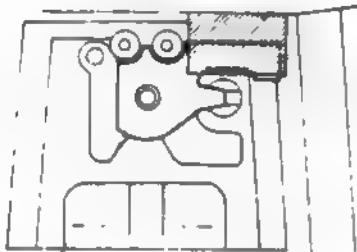

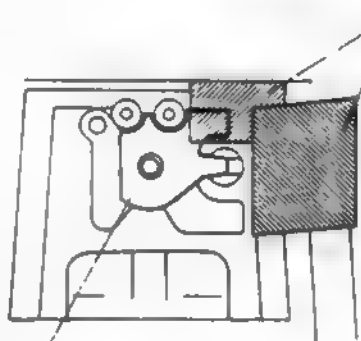

■ Bottom cover / 下カバー

■ Front cover / 前カバー

<p>T Y P e A</p>	<p>2017-0417-01 (Type A)</p>  <p>Material : ABS Treatment : E No. 4 材質 : ABS樹脂 処理 : E No. 4</p>	<p>2017-1005-31</p> 
<p>T Y P e A'</p>	<p>2017-0417-02 (Type A') 2017-0417-81 (Type A')</p>  <p>Material : ABS Treatment : E No. 4 : Black chrome 材質 : ABS樹脂 処理 : E No. 4 : 電解クロムコート</p>	
<p>T Y P e B</p>	<p>2017-0417-03 (Type B)</p>  <p>Material : ABS Treatment : E No. 4 Black chrome 材質 : ABS樹脂 処理 : E No. 4 : 電解クロムコート</p>	<p>2017-1005-32</p> 

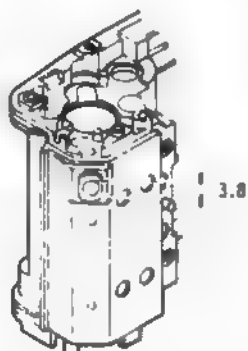

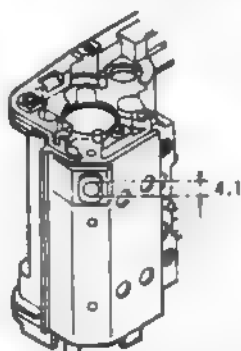

- Difference between 2017-0417-01 and 2017-0417-02 is only treatment.
- Use 2017-0417-02 (Type A') when replacing 2017-0417-01 (Type A).
(2017-0417-01 is not a service part.)
- New type part No. 2017-0417-02 is given since temporary part 2017-0417-81 (Type A') became a regular part, ordering of this part should be as 2017-0417-02.
- 2017-0417-01と2017-0417-02の違いは処理のみです
- 2017-0417-01 (Type A) 交換時は2017-0417-02 (Type A') に交換して下さい。
(2017-0417-01は部品供給致しません)
- 2017-0417-81 (Type A') は、臨時部品扱いでしたが正規部品となったため2017-0417-02と部番のみ変更しました
部品注文時は2017-0417-02で行なって下さい。

2017-0401-35

- Modification of VR₂ (interchangeable)
1.3 K Ω \rightarrow 2.6 K Ω
- VR₂の抵抗値変更 (互換性有)
1.3 K Ω \rightarrow 2.6 K Ω

■ Circuit base plate-B set

- Initial mass production of X-700 (with AE lock), secret Nos. 1L-2C, has SW.3 timing correction circuit on circuit base plate-B set for temporary use. For the production which has circuit base plate-B set, read the following description.

For the production whose secret No. is after 2D, circuit base plate-B set had been abandoned.

■ Interchangeability

- Temporary parts 2017-0401-81 (flexible P.C. board set) } Use both parts together
2017-0451-81 (circuit base plate-B set) } when replacing
 - Regular part 2017-0401-32 (flexible P.C. board set)
- Interchangeable, however, wiring is slightly difference.....Refer to Parts List page 19.

■ Service parts

- 2017-0401-81 is not a service part, use 2017-0401-32 when replacing.
 - 2017-0451-81 is a service part.
 - Electrical parts on 2017-0401-81 are the same parts of 2017-0401-32 except IC-3 (IC-3 is not a service part).
- When replacing individual element, refer to Service Manual P.18.
- Installing method of circuit base plate-B set.
Stick it on IC-1 using double-faced tape.

Circuit base plate-B set
(2017-0451-81)

■ B基板について

- AEロックス付X-700の生産当初(Body番号1L~2C)のものは、生産の都合上SW.3タイミング補正回路を追加したB基板セット(暫定部品)かかっています。このB基板セットのついた製品について以下に案内致します。尚、Body番号2D以降のものは、B基板セットは廃止しています。

■ 互換性について

- 暫定用部品..... 2017-0401-81 (フレキシブル基板セット) } 必ずヘアーにて使用のこと
..... 2017-0451-81 (B基板セット)
 - 正規部品..... 2017-0401-32 (フレキシブル基板セット)
- 相互に互換性有り。但し各々配線方法が一部異なります。.....パーツリストPage 19参照

■ 修理用部品について

- 2017-0401-81についてはサービスでの部品供給は致しません。不良発生時は、2017-0401-32に交換して下さい。尚、2017-0451-81については部品供給します。
- 2017-0401-81に搭載している電装部品はIC-3 (このIC-3は部品供給致しません) をのぞいて2017-0401-32と同じです。素子を単品交換する場合はサービスマニュアルP.18を参照して下さい。
- B基板取付方法
IC-1の上に両面テープにて貼付ける。

B基板セット
(2017-0451-81)

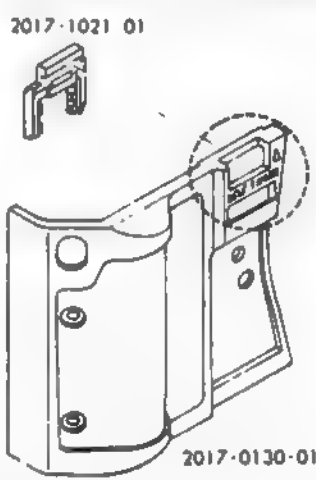

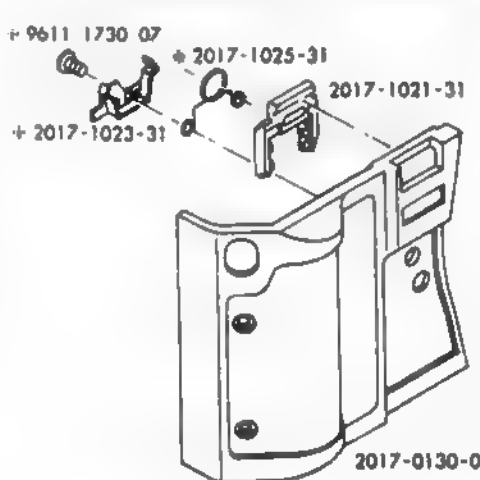

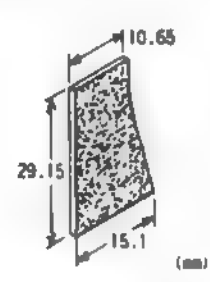

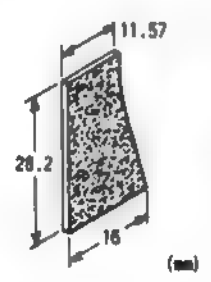

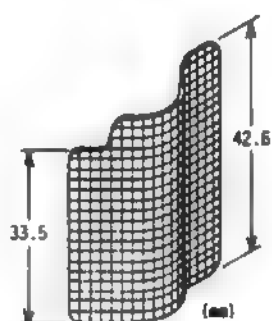

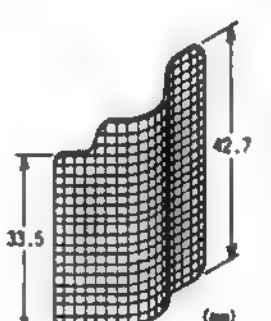

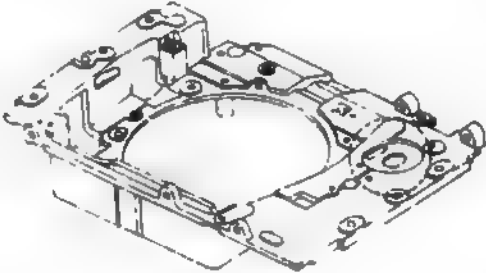

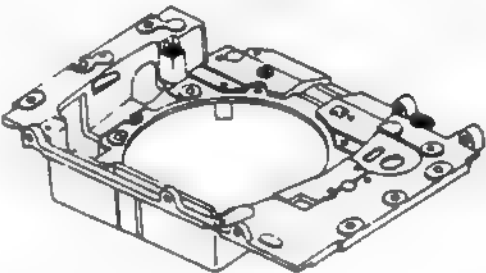

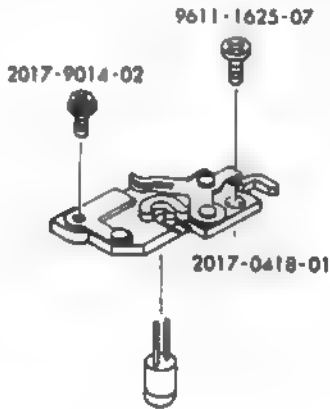

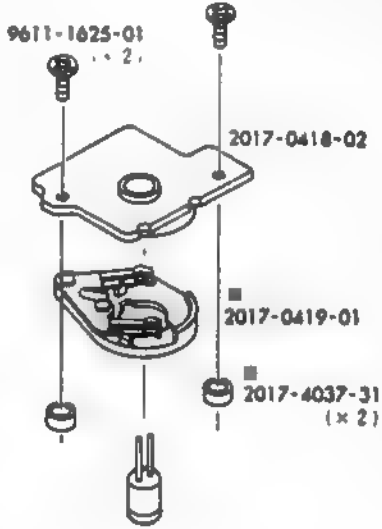

■ Exclusive parts List for X-700 (without AE lock)

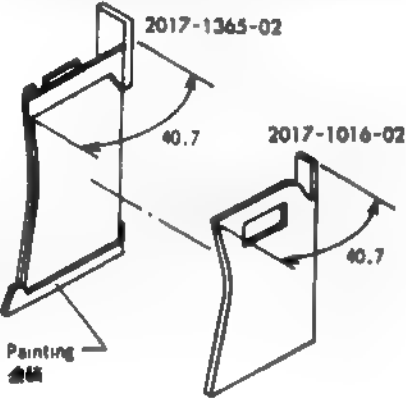

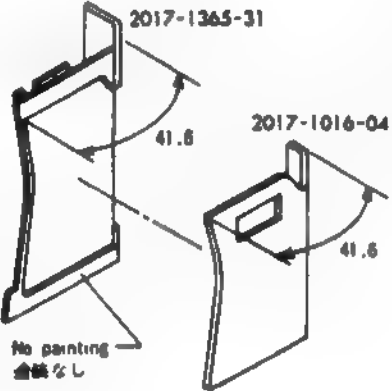

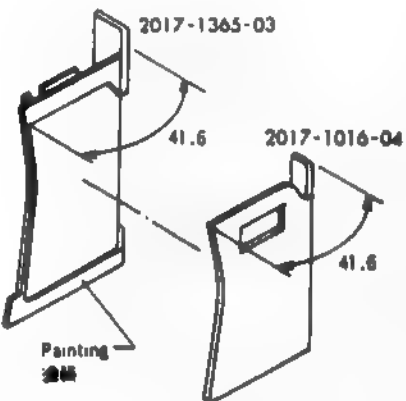

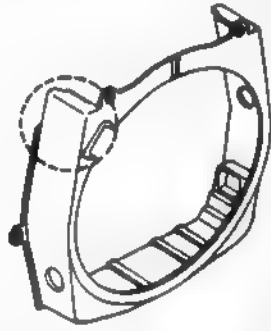

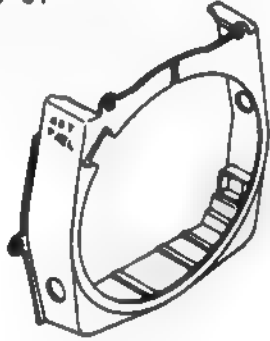

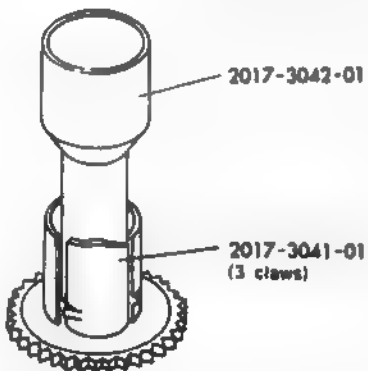

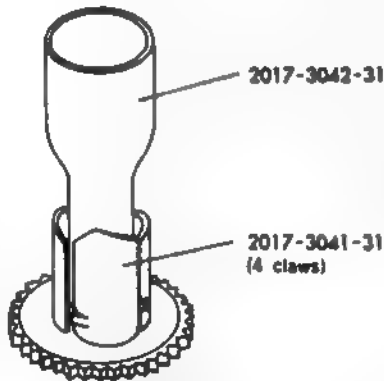

- Table below shows the parts difference between AE lock and non AE lock models.
- No interchangeability between each ones, however, other parts than table below are common parts regardless AE lock employment, so use Parts List P. 1~P. 17.

■ X-700 AEロック機能なしモデル専用部品表

- 以下の内容は、AEロック機能付（右欄）とAEロック機能なし（左欄）における使用部品の違いをまとめたものです。
- 各部品の互換性はありません。ト表以外の部品は、AEロック機能の有無に関係なく共通ですので、P. 1～P. 17のパーツリストを参照下さい。

■ Types of flexible P.C. board set, and details of modifications

- For 2017 without AE lock, 4 types of flexible P.C. boards, which are different in part position as shown below, are used. (Interchangeable)
- Elements other than R_{21} , R_{22} , C_{10} are common. (Refer to page 39)

■ フレキシブル基板セットの種類、変更内容

- AEロックの無い2017には下表のように部品の配置が少し不同了。4種類のフレキシブル基板セットが使用されています。(互換性あり)
- R_{21} , R_{22} , C_{10} 以外の各素子は共通です (P.39参照)

■ Flexible P.C. board set for without AE lock

- There are 4 types of flexible P.C. board set without AE lock (2017-0401-01, 2017-0401-02, 2017-0401-03, 2017-0401-82), but only 2017-0401-02 on this page is supplied as a service part.
- For other types, refer to page 38.

■ Interchangeability of IC₃ between 2017-4303-01 (non AE lock model) and 2017-4303-32 (AE lock model)

- 2017-4303-32 can be used instead of 2017-4303-01, however, cut off IC₃ pin 10 and 11 to avoid contacting with printed wiring on flexible P.C. board.
- 2017-4303-01 cannot be used instead of 2017-4303-32.

■ AEロック回路無しフレキシブル基板について

- AEロック回路無しのフレキシブル基板セットは4種類 (2017-0401-01, 2017-0401-02, 2017-0401-03, 2017-0401-82) ありますが、サービス供給部品はこのページの2017-0401-02のみです
- 他の種類については、Page 38参照

■ AEロック回路無しIC₃ (2017-4303-01) とAEロック回路付IC₃ (2017-4303-32) の互換性について

- 2017-4303-32は2017-4303-01の代りに使用可能 但しIC₃のピン番号10と11を切断すること (パターンに接触しないようにするため)
- 2017-4303-32の代りに2017-4303-01は使用不可

Assy. Part No. 2017-0401-02

Assy. Part Name: Flexible P.C. board set.

フレキシブル基板セト

Elements other than *marked are common to those with AE lock circuit.

*印以外の素子はAEロ、7回路付と共通です

REPAIR

■ The contents of this manual are mainly related to the assembly and adjustment procedures for the 2017.

■ Since the procedures mentioned in this manual are for assembly they should be followed in reverse for disassembly.

■ Description of symbols

- ⑤ : Grease used & part greased
- ⑥ : Oil used & part oiled
- ⑧ : Adhesive used & part adhered

1 Spool, sprocket, winding base plate A

Fig. 1 3037 spring setting

9691-2040-07 3340 Sprocket gear shaft:
Fig. 1 9762-2040-07

Winding base plate A

- Set it onto the body with the sprocket gear (3055) in position. Take care not to allow gear disengagement.
- Set the sprocket as shown in Fig. 2, and fit winding base plate A.

Positioning P 2

Groove

Engage with the sprocket clutch keeping the groove parallel with the body. The bottom claws must be as shown below.

Toward film side

Set in the direction illustrated
9721-0200-13

Spool

Sprocket

Sprocket shaft

Fig. 2

3421

■ Precautions

■ The following precautions must be taken concerning all plastic parts.

1. When cleaning, use Flonsolve or alcohol. Do not use thinner, ketone, ether, etc.
2. Secure all parts with the specified screws, taking care not to exert excessive stress to them.

■ Handling of the flexible board

The flexible board uses MOS ICs and is very sensitive to static electricity. Therefore, the following points must be kept in mind when repairing.

- When handling the flexible board itself or wiring it to the body, use a conduction mat to prevent static electricity, and perform all work as shown in the illustration below.

■ When grounding is impossible, connect the cable to a large metal plate (steel desk or shelf).

■ Sprocket gear positioning procedure

■ Fig. 1

■ Fig. 2

1. With the winding idler gear crest fitted in hole a of winding base plate A and with the sprocket idler gear bottom fitted in hole b, set the sprocket gear so that the shaft under the sprocket gear is parallel with winding base plate A.
2. Then, put a mark on the tooth of the winding idler gear at hole a, as shown in Fig. 2.
 - After marking the winding idler gear, align the mark with hole a and set the sprocket gear as shown in Fig. 1.

2 Winding shaft

LOCKTITE
'screw hole'

■ After mounting adjust
the reversion stop lever
stop timing. (P. 4)

5 Winding
shaft

■ Fig. 4 3047 spring setting

■ Do not allow it to ride on the winding gear.
(Fit the winding shaft, allowing it to move
in the direction of the arrow.)

3040
■ Fig. 3

■ Winding gear positioning procedure

■ Fig. 1 Winding idler gear position

■ Fig. 2

- 1 Make sure that the winding idler gear is positioned as shown in Fig. 1
- 2 Allow 3036 to move in the direction of the arrow then set the winding gear so that the punch mark of the winding gear is aligned with the mark of the winding idler gear Fig. 2

■ Reversion stop lever stop timing adjustment

- 1 Position the winding operation plate as shown in Fig. 3, and temporarily set the winding operation lever
- 2 With the winding claw and reversion stop lever fitted into the winding gear as shown in Fig. 3 press the winding operation plate in the direction of arrow B while applying a load to the sprocket in the direction of arrow A so that the winding claw is set securely onto the winding gear.

■ Fig. 3

- 3 Applying a load to the sprocket and winding operation plate as shown by A and B, turn the reversion stop lever shaft until the winding operation lever is disengaged from the winding operation plate. (Fig. 4)

■ Fig. 4

3 Winding base plate B

Fig. 1

Make sure that the punch mark of the winding gear is correctly facing the center of the winding idler gear and then set 3410 so that the V groove is positioned as shown above

Fig. 2 3416 spring setting

Fig. 3 3414 spring setting

Fig. 4 3424 spring setting

After completion of the assembly work, mount the film advance lever and carry out the adjustments and checks on P. 6, 7.

■ Overrun eccentric pin adjustment

1. After winding, hold the film advance lever and turn the eccentric pin (9291) counterclockwise until the sprocket shaft (3052) touches the winding shaft receiver. (Fig. 1)
2. Return the winding lever slightly, and then wind it again to set it in the condition shown in Fig. 2.

■ Fig. 1

■ Fig. 2

3. Then, shift the sprocket shaft by finger toward the body center to set it in the condition shown in Fig. 3, and slowly turn the eccentric pin (9291) clockwise until the overrun prevention lever is engaged with the ratchet of the sprocket shaft.

■ Fig. 3

- **Checking adjustment :** During the winding lever operation, the end of the overrun prevention lever should not be caught by the sprocket claw. After winding is completed, the lever should be engaged with the claw.

■ Winding mechanism check

① Position of sprocket claws

After winding, hold the winding lever and return the sprocket in the direction of the arrow, as shown in Fig. 1. The sprocket claw positions should then be as illustrated.

■ Fig. 1

② Reversion stop lever timing

Slowly turn the film advance lever while applying a load to the sprocket. The winding operation lever should disengage from the winding operation plate after (or at the same time) the reversion stop lever begins to engage with the claw of the winding gear.

■ Fig. 2

● Check through the clearance of the strap hanger screw.

③ Winding operation lever timing

After winding, slowly return the film advance lever. The winding stop lever should enter the 1st stop position of the charge operation plate. Before it enters the 2nd stop position, ① the winding claw should engage with the winding gear claw and ② the winding operation lever should disengage from the winding operation plate. A reversal in the timing of ① and ② is also allowable.

■ Fig. 3

4 Front base plate block assembly-1

■ Refer to the arrangement of the lead wires on the next page.

■ Push the release lever in the direction of the arrow to separate the release magnet. Set the mirror box while letting the preset lever go in the direction of arrow A.

■ Arrangement of front base plate lead wires

■ Fig. 1

■ Fig. 2

■ Fig. 3

Release magnet
Mirror operation lever

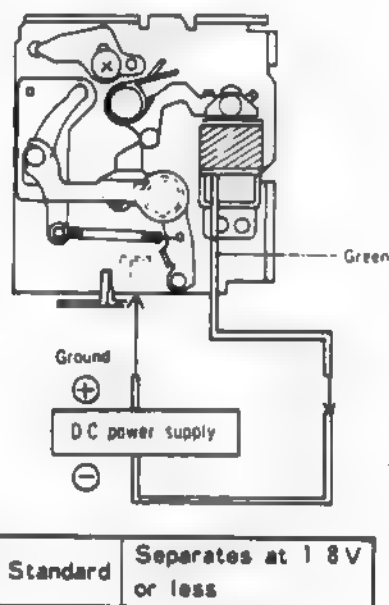

Standard 270 g or more

■ Fig. 2 Attraction

String
Spring scale 500 g

■ Fig. 3 Separation voltage

Standard Separates at 1.8 V or less

- **Attraction check** : As shown in Fig. 1, set a tension gauge to the pin of the mirror operation lever, and then check the value when the contact piece separates.
(If a tension gauge of less than 300g is not available, a spring scale of about 500g can be used as shown in Fig. 2.)
- **Separation voltage check** : As shown in Fig. 3, connect to a D.C power supply and check to see if the contact piece separates at 1.8V or less.

2 Release magnet, aperture magnet

■ Fig. 4 Release magnet

Release lever

Standard 150 g or more

■ Fig. 5 Aperture magnet

Aperture stop claw

Standard 100~200 g

■ Fig. 6

Standard Separates at 1.8 V or less

- During the aperture magnet measurement (both attraction and separation voltage), the release magnet should be separated.

5 Front base plate block assembly-2

Fig. 1 4344 spring setting

6 Front base plate block assembly

■ After completion of assembly, perform the shutter gear position and shutter charge adjustments.

■ Fig. 1 SW. 4 lead wire arrangement

■ Shutter gear position adjustment

- 1 Engage the gears so that the mark of charge gear A faces the center of charge gear C, and tighten 9012. The gear engagement clearance should be 0.1~0.2mm.

■ Fig 1

■ Shutter release procedure

- In this camera, the mirror operation mechanism is started with the separation of the mirror magnet (M Mag). Therefore, after mounting the shutter block on the body, the shutter cannot be released unless the flexible P.C board is installed with the wiring completed. For this reason, the shutter should be released by the following method when performing any checking or adjustments, such as for winding, mirror box, shutter release, etc., after assembling the front base plate block as shown on P. 8.

- 1 By using a release tool (2017-0003-75).

- 2 By using a battery

■ Caution: In both methods (1) and (2), supply power until the completion of shutter operation.
(Otherwise the shutter tester may fail to give a correct indication.)

■ Shutter charge adjustment

- 1 Slowly turn the film advance lever and check the over-charge from the time the 2nd curtain is stopped (the 2nd curtain stop lever moves from A to B, as shown below) until the film advance lever stops by checking the movement of the sprocket idler gear.

■ Fig. 1

Caution: If the winding operation is not smooth, or if the overcharge exceeds two teeth, immediately stop winding and adjust.

■ Adjustment procedure

- Overcharge is less than 1 tooth.....Turn the eccentric pin (9281) counterclockwise.
- Overcharge is over 1.5 teeth.....Turn the eccentric pin (9281) clockwise.

■ Fig. 2

- If the adjustment by the eccentric pin is not sufficient, shift charge gear A by one tooth. (In the case of an undercharge, shift it in the direction of a, and in the case of an overcharge, in the direction of b, as shown in Fig. 2.)

7 Flexible P.C board installation

■ After installing the flexible P.C board and soldering the lead wires, carry out the adjustment of P. 17~31.

■ If the shutter block has been disassembled, adjust it before mounting the circuit board.

■ Fig. 1

■ Fig. 2

■ Preparation for adjustments

Put the camera into the condition shown below before starting adjustment.

■ Body back adjustment

- Measuring instruments : Body back gauge
: Flat plate (for 2005)
: Dial gauge

■ Adjustment procedure

Check and correct the flatness of the pressure plate contact surface before measuring the body back.

(Standard) 43.72 ± 0.01 mm
 -0.02

■ Fig. 1

- If the body back is lower than the standard value, insert adjusting washers under the bayonet mount.

[Types of adjusting washers]

Part No.	2005-1061-81	2005-1062-81	2005-1063-81
Thickness (mm)	0.02	0.05	0.1

- If the body back is higher than the standard value, replace the bayonet mount with the bayonet mount used for repair (2017-1010-81) and adjust in combination with the adjusting washers.

The flange of the bayonet mount used for repair is 0.1 mm thinner than that of the regular bayonet mount (2017-1010-01).

Viewfinder back adjustment

- Measuring instruments : 1000 mm collimator Model RC-1000 I, II, III
: Master lens for 05i finder back adjustment 054-5202-79.
: Magnifier

■ Adjustment procedure

1. Set the camera so that the chart image is as shown in Fig. 1, and set the scale of the master lens to 43.565.

■ Fig. 2

2. Make sure that the scale of the master lens is positioned as shown in Fig. 2, and move the 3 adjusting screws of Fig. 3 up and down uniformly to adjust the vertical line of the chart image.

■ Fig. 3

- If the microprism is partially obscure, adjust the vertical balance by using the screws, taking care not to deflect the vertical line of the chart image.

3. When the helicoid of the master lens is turned to adjust the focus after operating the shutter several times, the scale position of the master lens should be as follows:

■ Fig. 4

Allowable range

MD lever position adjustment

■ **Measuring instruments** : Master lens for A-auto (2005-0002-75,
: Digital multimeter · Type 2508, 3476, 2507,

■ Adjustment procedure

1. Mount the master lens onto the body and set the MD ring to F 16.
2. Loosen the setscrew (9612-1630-07, 9120) of the AV P.C board and adjust by moving the AV P.C board so that the MD lever contact comes to the F 16 pattern center of the AV P.C board. (Move screw downward if loose)

■ Fig. 1

3. Set the MD ring to F 32, and then make sure the lever contact is on the F 32 pattern.

■ Checking adjustment

Check to see if the MD contact is correctly in contact with the pattern as shown in Fig. 2, and then make sure the measured voltage is as described in the table below. Set the metering switch (S₁ or S₂) to ON for the measurement.

■ Fig. 2

MD ring	Measuring pattern	Voltage (mV)
No lens	MC	0
	F 16	About 800
	F 32	
F 16	MC	About 800
	F 16	0
	F 32	About 800
F 32	MC	About 800
	F 16	
	F 32	0

■ LED position adjustment

■ Adjustment procedure

1. Loosen the 3 screws of the LED P.C. board and adjust by moving the LED P.C. board so that the LEDs (M to *) are clearly seen without shading (the letter "P" in particular). Then, tighten screw 1 and check before tightening screws 2 and 3.
 (Turn S₁ ON with pincettes so that the * LED lights up.)

■ Fig. 1

■ F No. infinder adjustment

(Standard)

Frame position	Height	0.5 a ~ h
	Width	Within microprism
Aperture value	Should be within frame, adjust letter should be invisible at F5.6	

■ Fig. 2

■ Adjustment procedure

1. Check for deflection, as shown in Fig. 3, and adjust by bending (shifting) the aperture mirror holder and infinder mask in the directions A~F shown in Fig. 4.

■ Fig. 3

(Normal position is shown by thick lines.)

■ Fig. 4

• If the infinder mask is shifted, apply ALTECO CN-2 to it later.

1. Solder the 3 leads for measurement, and connect the measuring instruments as shown in Fig. 1 (P 22). (Make a zero adjustment of the high impedance adaptor.)
2. Turn ON the metering switch and measure the voltage at **A** of Fig. 1. Next, check if the voltage at **B** is the voltage at **A** ± 2 mV. If not, make the adjustment in the following.

■Fig. 1

■Fig. 2

- 3 As in Fig. 2, remove R_{21} (sometimes not provided), solder the 2 leads for measurement to the part, and connect them to the R_p resistance selector.
 • R_{21} is provided between ① and ② or ② and ③ of Fig. 3.)
- 4 Turn the dial of R_p resistance selector so that the voltage at B of Fig. 1 equals the voltage at ③, and then select the R_{21} whose resistance is most approximate to the resistance from among those mentioned in the table below.
 - Attach the selected R_{21} to the side measured by the R_p resistance selector.
 - If the voltage between ② and ③ of Fig. 3 is too high, even with the dial position at ③, measure it between ① and ③. (Conversely, if the voltage is too low between ① and ③, measure it between ② and ③.)

Types of R_{21}

Part No.	Resistance	Part No.	Resistance
9432-2436-62	24K Ω	9432-5136-62	51K Ω
9432-2736-62	27K Ω	9432-6836-62	68K Ω
9432-3336-62	33K Ω	9432-1046-62	100K Ω
9432-3936-62	39K Ω	9432-2046-62	200K Ω

■Fig. 3

2 Adjustment of ASA inclination

■Measuring instrument: Digital multimeter (Type 2508, 3476, 2507)

■Adjustment procedure

1. Set the metering switch to ON and adjust by turning VR_{10} so that the voltage at the point in Fig. 3 is 360 ± 4 mV.

■Fig. 4

3 Adjustment of manual SS inclination

■ **Measuring instruments**: Digital multimeter Type 2508, 3407, 2507.
: Rp resistance selector Model RS- I, II, III, IV

■ Adjustment procedure

1. Voltage measurement and standard

1. Solder the measuring lead wires to terminal ① of IC₁ and ② of IC₂.
2. Set the shutter dial to 1 (sec.) and measure the voltage with the metering switch ON.
(Fig. 1)

■ Fig. 1

[Standard] $360 \pm 4 \text{ mV}$

● Ambient temp. should be $25 \pm 2.5^\circ \text{C}$.

● Apply the standard values mentioned below according to the ambient temperatures during the measurement.

Temperature ($^\circ \text{C}$)	20 ± 2.5	25 ± 2.5	30 ± 2.5
Standard value mV	351 ± 4	360 ± 4	360 ± 1

3. If the voltage is outside the standard value, adjust it according to the following procedure.

2. Adjustment

1. Remove R₁₈ (if there are two, remove only one) and solder the measuring lead wires.
2. Connect the Rp resistance selector and, while measuring the voltage as described in section 1, turn the Rp resistance selector so that the voltage becomes the standard value.

■ Fig. 2

- If the voltage is not at the standard value with the selected resistance, choose a resistance closer to those mentioned in the table below and check the voltage with it.
- If one R₁₈ is not enough, use two.
In this case, they must be parallel-connected as shown in Fig. 2.

(Types of R₁₈)

Part No.	Resistance (K Ω)	Part No.	Resistance (K Ω)
9422-2736-62	27	9422-4736-62	47
9422-3036-62	30	9422-5636-62	56
9422-3336-62	33	9422-6836-62	68
9422-3936-62	36	9422-1046-62	100
9422-3936-62	39	9422-1546-62	150
9422-4336-62	43		

4 Manual SS adjustment

■ Measuring instruments: Shutter tester (Model S-2101, FS-1DMN1)

■ Adjustment procedure

■ Fig. 1

1 Shutter speed adjustment and check (see the table below)

Step	Item	Part adjusted	Adjustment (check)	Remarks
1	1/1000 curtain speed check	-	Both 1st & 2nd curtains are within 13 ms.	If it is more than 13 ms or less than 10 ms, adjust the 2nd curtain speed.
2	1/60 adjustment	VR	13.6 ms	If it is shorter than 13.6 ms at step 1, check the full opening of the curtain.
3	1 sec check	-	812 ~ 1231 ms.	If it is not within 812 ~ 1231 ms, recheck 1/60 at 12.7 ~ 19.2 ms.
4	1/1000 adjustment	S ₁ eccentric pin	0.98 ms	-----
5	1/200 check	---	1.48 ~ 2.58 ms	If it is not within 1.48 ~ 2.58 ms, recheck 1/1000 at 0.74 ~ 1.29 ms.
6	X time lag		(Range A: 0.1 ms or more) (Range B: 2.4 ms or more)	Check it with SS 1/60 and if it is defective, perform the adjustment on P. 38.

● When the exposure unevenness at steps 2) ~ 5), is over 0.3 EV in both B-A and B-C ranges, and over 0.1 EV in the A-C range, adjust the curtain speed as follows.

● For the shutter speed standard, refer to the inspection standard.

2. Curtain speed adjustment

Adjust by turning the ratchet so that the 1st and 2nd curtain speeds are 11 ± 0.3 ms at 1/1000.

■ Fig. 2 (Increasing the curtain speed)

■ Fig. 3 (decreasing the curtain speed)

- Remove the battery case base plate to release the ratchet and let it return. (Do not return it completely)
- Return it sufficiently and adjust by slowly increasing the curtain speed.

5 A-auto level adjustment

- Measuring instruments : Luminance box (Model L-2101, L-222, L-223)
 : EE tester (Model EE-2101, EE-2111)
 : SS adaptor for EE tester (Model SD-2101)
 : Master lens for A-auto (2005-0002-75)
 : Temporary cover (2017-1301-75)

■ Adjustment procedure

1. Set the camera and measuring instruments as follows.

■ Fig. 1

2. Adjust and check as follows:

Step	Luminance	Shutter speed adjustment	EE level allowable range	Part adjusted
1	EV 11	15.6 ms	—	VR ₁ (Fig. 2)
2	EV 15	—	±0.4 EV	(Check only)
3	EV 5	—	±0.4 EV	(Check only)

■ Fig. 2

- If it cannot be adjusted by VR₁, or if the EE level exceeds the allowable range, check to see if the manual shutter speed is correctly adjusted.

6 LED indication adjustment

- Measuring instruments : Luminance box Model L-2101, L-222, L-223
 - : Temporary cover 2007-1301-75
 - : Master lens for S-auto 2007-0001-75

■ Adjustment procedure

1. Adjust by turning VR as described in the table below according to the type of luminance box.

■ Fig. 1

■ Fig. 2

L-2101			L-222, L-223	
Luminance	Aperture	K value	Luminance setting button	Aperture
EV 10-14	F7.6	1.2	EV 10-14 C-1 S-SIZE	F7.6
Turn VR; so that only the LED of 30 lights up, and slowly turn VR until the LED of 15 begins to light up			Turn VR; so that only the LED of 30 lights up, and slowly turn VR; counterclockwise until the LED of 60 begins to light up.	

2. Checking adjustment 1

L-2101		L-222, L-223	
Luminance	Aperture	Luminance	Aperture
EV 10	F7.6	EV 11	F8

2 Other luminance--L-2101, L-222, L-223

Luminance	Aperture	Allowable LED-ON range (EV)					
EV 5	F4	1					
		2					
		1					
EV 14	F7.6	1000					
		500					
		250					

- Deflected toward high speed side at EV 14
 - Replace the resistor (R₁₂) with one of larger resistance.
- Deflected toward low speed side at EV 14
 - Replace the resistor (R₁₂) with one of smaller resistance.

7 Strobe level adjustment

A Adjustment by luminance box (Model L-2101)

- The Model L-2101 luminance should be used. However, ones with color temperatures ranging from 2600K to 3000K (measured value of the Minolta color meter) at EV 15 can also be used.
- Luminance boxes with long-wavelength cut filters and lamps with cold mirrors cannot be used because of measuring errors. (Ex. Model L-223)
- When no luminance box is used for the adjustment, employ method B on the next page.

- Measuring instruments :
- Luminance box (Model L-2101)
 - Strobe level adjuster (2017-0001-75)
 - Standard reflector (2017-0002-75)
 - Temporary cover (2017-1301-75)
 - Master lens for A-auto (2005-0002-75)
 - Constant voltage D.C power supply (Model 524B E-1, E-2)
 - Digital time counter (Model TC-1)

■ Adjustment procedure

1. Solder the measuring lead wires (2 wires) to the camera and connect the measuring instruments as follows:

■ Fig. 1

2. With the shutter released, adjust by turning VR₁ so that the indication of the time counter is $0.63 \pm 0.1 \text{ ms}$.

■ Fig. 2

② Adjustment by strobo tester (Model ST-III)

Model ST-I and II cannot be used because non-cord adjustment is impossible.

■ Measuring instruments: Strobe tester Model ST-III

: Standard reflector (2017-0002-75)

: Master lens for A-auto (2005-0002-75)

Temporary cover (2013-1001-75)

Reflection paper (1.3m x 2m) -- used for adjustment of Minolta AEF series

: Exclusive flash (AEF 280PX) -- Code No. 8808

■ Preparations

Connect the temporary cover to the body with the lead wires as shown in Fig. 1 on the next page. Set the measuring instruments as shown below.

■ Fig. 1

■ Adjustment procedure (darken the room to eliminate the influence of external light)

1. Set the flash main switch to ON, and 30 sec. or more after the pilot lamp illuminates, look into the viewfinder of the strobo tester (shown above) from near the flash, and then direct the eyepoint of the view center to the center of the reflection paper. Next release the camera shutter and read the indication of the strobo tester.
2. If the indication of the strobo tester is not within **F 5.6 ± 0.5EV**, adjust by turning VR₆.

Fig. 2

■ Fig. 2

About the standard reflector:

- Do not stain the reflector by touching it with the hand, etc., or correct measurement will not be possible.
- When the reflection surface is exposed to light, a color change occurs causing changes in the reflection factor. It must be replaced with a new one about once a year. The reflection paper can be replaced; reflection paper is available for this purpose. When placing an order, specify reflection paper for 2017-0002-75.

8 Bending point level adjustment

- Measuring instruments : Luminance box Model L-2101, L-222, L-223)
 - : EE tester Model EE-2101, EE-2111)
 - : Master lens for A-auto 2005-0002-75,
 - : Master lens for S-auto 2005-0001-75
 - : Temporary cover 2017-1301-75
 - : Exclusive flash AEF 280PX---Code No. 8808

■ Adjustment procedure

1. Connect the temporary cover to the flexible P.C board with the 4 measuring lead wires, and set the flash on the temporary cover shoe.

■ Fig. 1

- Luminance box
Luminance : EV 8
: EV 9 + ND filter 50% in case of
L-222, L-223)
K value : 1.2
- EE tester
ASA : 400
K value dial : 1.2
- Camera lens

Step	Lens	Aperture	Mode	ASA
1.	Master lens for A-auto	—	A	100
2.	Master lens for S-auto	F16	P	

2. Set the camera lens as shown above and measure the EE level in A and P modes. Check to see if the EE level difference is within $\pm 1 \text{ EV}$.
3. If the EE level difference is more than 1 EV between the A and P modes, replace R_n and adjust.

[Type of R_n]

Part No.	Resistance
9432-1226-61	1.2 K Ω
9432-3926-61	3.9 K Ω
9432-7526-61	7.5 K Ω

■ Checking A and P modes

- Measuring instruments : Luminance box Model L-2101, L-222, L-223
 : EE tester Model EE-2101, EE-2111
 : SS adaptor for EE tester Model SD-2101
 : Master lens for S-auto 2005-0001-75
 : Temporary cover 2017-1301-75

■ Preparations

Set the camera and measuring instruments as follows:

■ Fig. 1

■ Checking procedure

1. **A mode**...Check LED indication and EE level as shown in Table 1.

Table-1 (Shutter dial : A, ASA : 100)

Luminance	Aperture	Allowable range of LED-ON						Allowable range of EE level
EV 5	F 4	4						0 ± 0.8 EV
		2						
		1						
EV 11	F 8	60						
		30						
		15						
EV 11	F 5.6	1000						
		500						
		250						

2. **P mode**...Check LED Indication, shutter speed, and EE level as shown in Table 2.

Table-2 (Shutter dial : P, ASA : 100, Aperture : F 16)

Luminance	SD-2101 aperture switch	Allowable LED ON and relative SS		Allowable range of EE level
		LED ON	Allowable range of shutter speed	
EV 15	F 8	1000, 500	0.58 ~ 3.28 ms	0 ± 0.8 EV
		500	0.82 ~ 4.65 ms	
		500, 250	1.16 ~ 6.57 ms	
* EV 10	F 2.8	250, 125	2.32 ~ 13.1 ms	
		125	3.28 ~ 18.6 ms	
		125, 60	4.65 ~ 26.2 ms	
EV 5	—	30	—	
		30, 15		
		15		
		15, 8		
		8		

* EV 11 + ND filter (50%) must be used in case of luminance box L-222, L-223.

■ Checking release lock voltage and LED OFF voltage

■ Measuring instruments : Constant voltage D.C power supply (Model 524B, E-1, E-2)
: Digital multimeter (Model 2508, 3476, 2507)

■ Checking procedure

Connect D.C voltage to the camera. (+ ... to battery case contact, - ... ground to battery case base plate)

1 Release lock voltage

Standard	2.10 ± 0.15 V
----------	---------------

2 LED OFF voltage

Standard	2.40 ± 0.15 V
----------	---------------

■ Checking high and low shutter speed limits

■ Measuring instrument : Shutter tester (Model S-2101, FS-10MN1)

- 1 High shutter speed limit (shutter speeds in other than high luminance operation in A and P modes)
● Check the shutter speed with the shutter dial set to A and P.

Standard	0.69~1.38 ms
----------	--------------

- 2 Low shutter speed limit (shutter speeds in other than low luminance operation in A and P modes)
● Set the shutter dial to A and P, and then check the exposure time with light to the receiver interrupted.

Standard	within 5 sec.
----------	---------------

8 External parts (completion)

How to install (Fig. 8, 9)
(Counter clockwise screw)

3-BOND 1401B

1st curtain spring cylinder

2nd curtain spring cylinder

Shutter curtain

2144

Can be set in any position

To attach or detach the shutter curtain slightly widen the bearing part in the direction of the arrow

Shutter base plate

Remove parts in the order 6~2

Fit the spring cylinder side onto the shutter base plate (refer to the next page), and set up the 2nd curtain shutter gear before fitting onto the curtain shaft side.

Adjust the curtain position after assembly. (P 35)

■ Fig. 3 Charge gear positioning

■ Fig. 4 2114 spring setting

■ Fig. 5 2123 spring setting

■ Shutter curtain mounting procedure (SP cylinder side)

1. Arrange the shutter curtains as shown in Fig. 1 and fit them in the holes of the shutter base plate in the order 1 → 1. When fitting in 1, slightly widen the bearing part of the shutter base plate

■ Fig. 6

■ Fig. 7

■ Fig. 8

2. Fit the curtain spring retainer into the 1st curtain spring cylinder by turning it in the direction of the arrow shown in Fig. 7
3. Set the ratchet in the correct position (Fig. 8), and attach the ratchet stop spring. (Fig. 9)

■ Fig. 9

4. Charge the curtain spring by 6 turns for the 1st curtain and 4 times for the 2nd curtain.

1st curtain position adjustment

- 1 Turn the 2nd curtain cylinder to stop the 2nd curtain halfway. (Fig. 1)
- 2 Turn the 1st curtain shutter gear counterclockwise until it touches the stopper. Then turn the 1st curtain cylinder counterclockwise to position the 1st curtain slit as shown in Fig. 2.

■ Fig. 1

■ Fig. 2 1st curtain position (with its travel completed)

● Adjust so that the 1st curtain slit is positioned 2.5~3 mm from the picture frame.

- 3 Holding the 1st curtain cylinder to prevent deflection of the position show in Fig. 2, fit 2126 and stop it with 2131 (curtain ribbon guide plate—P. 33). After that, check for deflection of the position (Fig. 2)

2nd curtain position adjustment

- 1 Shift the 2nd curtain shutter gear upward and turn it to the position shown in Fig. 3. Turn the 2nd curtain cylinder clockwise and hold it in the position shown in Fig. 3.

■ Fig. 3

■ Fig. 4

- 2 Turn the 2nd curtain shutter gear (Fig. 3) clockwise while pressing it down (slightly applying a force to the 2nd curtain cylinder clockwise) so that boss A is engaged with boss B.
- 3 Check to be sure that the 2nd curtain slit is positioned as shown in Fig. 5.

■ Fig. 5 2nd curtain position (with its travel completed)

■ Checking curtain stop position (with winding completed)

1 1st curtain stop position

■ Fig. 1 Slit remaining in picture frame

■ Fig. 2 Overlapping of the curtains

2 2nd curtain stop position

(check while letting the 1st curtain travel.)

3 Curtain tilt (deflection from picture frame)

■ Fig. 4

- Check both 1st and 2nd curtains at the edges of the picture frame.

Shutter assembly-II

Fig. 3 2183, 2184, 2192 spring setting

Fig. 2

Shutter block adjustment

■ Measuring instruments : Camera standard tester Model ST-5101
Shutter tester Model S-2101, FS-1DMN4

■ Preparations

- 1 Mount the shutter onto the front base plate block and install it onto the body as shown in Fig. 1
- 2 Connect the tester as shown in Fig. 2

■ Fig. 1

Operate the shutter as described on P. 13

■ Fig. 2

■ Adjustment procedure

1 Curtain speed adjustment

- 1 Set the SS-SEL. of ST-5101 to 1000 and adjust by turning the curtain spring cylinder shaft so that both curtain speeds are **11-0.3 ms**. (Fig. 3)
- When the curtain is not open, shift SS-SEL. to 60 and make a rough adjustment beforehand so that both curtain speeds are about 12 ms, and then adjust again with the SS-SEL. set to 1000

2 Shutter speed adjustment

- 1 With the SS-SEL. set to 1000, release the shutter and adjust by turning the S₁ eccentric pin so that the shutter tester indicates **0.98 ms**. (Fig. 4)

3 X time lag adjustment

- 1 Connect the synchro cord of the shutter tester to the camera. (Fig. 2)
- 2 With the SS-SEL. set to 60, release the shutter and check to be sure that the speed is **0.4 ms or more in range A and 2.4 ms or more in range B**.
To make the adjustment, bend the end of the X contact.

■ Fig. 3

● Increasing the curtain speed

● Decreasing the curtain speed

■ Fig. 4

■ Fig. 5

Mirror box assembly- I

• Dilute one part of anti-diffusion agent (FC-721) with ten parts of solvent (FC-77).

Mirror box assembly-Ⅱ

■After the completion of assembly, adjust the mirror angle as described on the next page.

■Fig. 1 2519 spring setting

■Fig. 2 2517, 2520 spring setting

■Fig. 3 0571, 5121 spring setting

Note: Regarding the washers under mirror magnet, two washers or one washer or no washer are used depending on the attraction of magnet.

Mirror angle adjustment

■ **Measuring instrument:** Mirror angle adjuster (Model NA-III, II)

■ Preparations

1. Mount the mirror box on the front base plate.
2. Loosen the setscrew (9001) of mirror adjusting plate A and B, position them as shown in Fig. 1, and then slightly tighten (9001). Completely shift the mirror sub-stopper down as shown in Fig. 2.
3. Set the front base plate block onto the mirror angle adjuster.

■ Fig. 1

■ Fig. 2

■ Adjustment procedure

1. Set the mirror height gauge and front base plate block opposite to each other and adjust by turning the mirror stopper shaft so that the gauge end is aligned with the mirror end. (Insert a screwdriver into the hole beside the mirror box.)

■ Fig. 3

■ Fig. 4

Front base plate block
Mirror height gauge

2. Place the front base plate block opposite to the auto collimator. Looking into the auto collimator, move mirror adjusting plates A and B in the direction of the arrow in Fig. 6 until the center of the chart image is aligned with the center of the cross (Fig. 7), and then tighten setscrew (9001).

■ Fig. 5

■ Fig. 6

■ Fig. 7

3. Push up the mirror sub-stopper until its end lightly touches the mirror operation lever pin, and then tighten the setscrew.

■ Fig. 8

4. Operate the mirror several times and make sure that the chart image is within the standard $45^\circ \pm 10^\circ$.

■ Fig. 9

- If it is not within the standard $15^\circ \sim 10^\circ$, perform adjustments 1~3 again.

5. After completing the adjustment, apply screw-lock (3-BOND 1101B) to the screw head of mirror adjusting plates A, B, and the mirror sub-stopper, and adhere the flare prevention sheet B (5030~P. 39).

■ Slow synchro improvement procedure

■ Purpose

Slow synchro and TTL auto flash control are made possible for flash photography in M mode, when 2017 (X-700) and H808 (AEF-280PX) are combined.

Mode	Standard specification		Improved specifications	
	Shutter speed	Flash light control	Shutter speed	Flash light control
P	1/60	TTL programed auto	1/60	TTL programed auto
A	1/60	TTL auto	1/60	TTL auto
M	1/60	Full flash	● Dial position 1~60 ...set position speed ● Dial position 125~ 1000...1/60	TTL auto

■ Improvement procedure

- 1 Remove the top cover, shutter dial shaft (0276) and main switch guide (0412).

■ Fig. 1

2. Shortcircuit between the terminals of IC-2 ③ and ④ on the flexible circuit board by solder ① of Fig. 2), and cut off pattern ② of Fig. 2 by using a cutter.

■ Fig. 2

■ Focusing plate replacement procedure

■ For view finder cleaning without camera disassembly or focusing plate replacement follow the procedure given below.

■ Removal

Insert the tweezers between the focusing plate and focusing plate holder A. Slightly tilt the tweezers to raise the focusing plate for removal.

■ Fig. 1

■ Mounting

Hold the focusing plate as illustrated, fit part A onto the bend of focusing plate holder B, press down arrow-marked part B; and insert projection C into the hold of focusing plate holder A.

■ Fig. 2

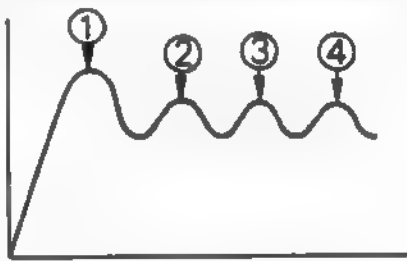

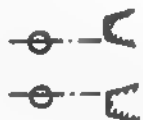

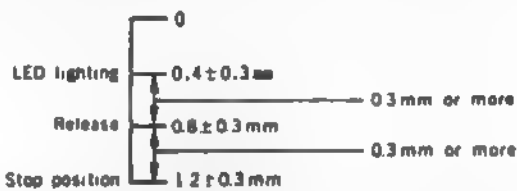

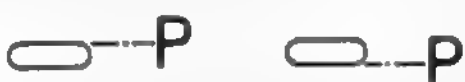

■ Mounting check

After mounting the focusing plate, check that the view finder back and EE level are correctly positioned.

Inspection Standard

1. This standard specifies uniform performance levels for servicing in order to guarantee our product's quality to customers. Each item is detailed so that you can follow this standard when you receive inquiries from users or are asked for checks.
2. When delivery or acceptance inspections are required, do not directly apply this standard to the performance measurements, but refer to the corresponding standard (manual).
3. Some users, because of their taste or special purposes, may require adjustment of this standard. In this case, perform the adjustment according to the user's request whenever possible.

Check Item	Checkpoint	Description
Main switch		Operation.....Squeak, roughness, click feeling.
		Display.....When the indication window is viewed from above, the nearby character shall not come in sight. <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Faulty</p>  </div> <div style="text-align: center;"> <p>Faulty</p>  </div> <div style="text-align: center;"> <p>Green</p>  </div> </div>
		BeeperA beeper shall sound when the touch switch is turned ON, any LED 30 ~▼ inside the finder lighting up, in "ON)))" position.
Winding	Winding lever	Operation.....There shall be no uneven action, roughness, sticking or contact, etc.
		PlayShall be less than 0.7mm at the tip of the lever.
	Spool	Operation.....An even and smooth idle rotation shall enable the film to rewind securely.
		Spool torque...200 to 300 g (②, ③, ④ as shown in the figure below) 
	Sprocket	Operation.....Slip, no-load rotation with the rewind button depressed.
Rewinding	Rewind button	Operation.....Lock, unlock (To be reset at the first half of rewinding), touch or contact.
		Lock position...Should be above, the bottom cover. Unlock position...Should be below the bottom cover surface.
	Rewind handle	Operation.....There shall be no uneven heavy movement, touch or contact, etc.Effective spring action.
Film counter	Counter dial	FeedThe counter dial shall be 1 when the rear lid is closed and the film is wound twice. There shall be no contact, skip, etc.
		ReturnThere shall be no contact, etc., and the counter dial shall return to S.
		Index deviation...Shall be within the range as illustrated below: <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div>

Check Item	Checkpoint	Description																																																
SLS		Operation.....SLS shall not come in sight in case of no film loaded.SLS shall come in sight as illustrated below in case of a film loaded. Counter..... 1  (SLS lever shall appear one third of the window) Counter.....36+ 2  (In sight)																																																
	Shutter	Shutter button	Operation.....There shall be no roughness, contact, shock, etc., and the shutter button shall return to the original position. Stroke..... 																																															
Speed dial		Operation.....There shall be no squeak, roughness, etc., and the dial shall rotate smoothly. Click feeling.																																																
		Index deviation...The center of speed and mode letters is level with the upper or lower line of the index. 																																																
		LockDial shall be locked securely in A and P positions.Lock button shall not squeak and be pressed in smoothly.																																																
	Shutter curtain	<ul style="list-style-type: none">• There shall be no pin holes, surplus adhesives, etc.• Edge metal shall not come in sight at the shutter wound and released.• 2nd curtain edge metal shall not be in sight more than 0.5mm on the way of winding, viewed from the body rear. Operation.....There shall be no contact between 1st and 2nd curtains, bounds inside the image frame, protrusion of the curtain, abnormal sound, etc.

	④ High/Low speed limit	<ol style="list-style-type: none">1. High-speed limit: The exposure time shall be within 0.69 to 1.38 ms at high-luminance interlocking at A and P modes. (Check by the shutter tester at A or P mode.)2. Low-speed limit: The exposure time shall be within 5 seconds at low-luminance interlocking at A and P modes. (Check by interrupting light to the light receiver at A or P mode.)														
	⑤ AE lock	<p>Exposure change with continuous shooting (Both of A and P mode)</p> <ul style="list-style-type: none">● Standard...Measured values should be within ± 0.6 EV against EE level without AE lock.● Check procedure.....<ol style="list-style-type: none">1. Check the EE level at the EV 15 of the luminance box.2. Shoot 7 times every 5 sec. after AE lock and check the EE level at the same time. (When AE lock used, turn the sencer switch ON first.)														

Check Item	Checkpoint	Description
Focus	Mirror	Angle..... $45' \pm 10'$
		Operation.....There shall be no play, two-step movement, improper timing, bounds within the image plane, etc.
		Inclination ... Shall be within 0.4 mm for the light shield plate in the up position.
		SPC-B shutter...Shall be open when the mirror is up. (Check with B.)
	Body back (Pressure plate back)	$43.72^{+0.01}_{-0.02}$ mm (from the pressure plate margin to the lens mounting surface)
	Finder back	43.565 ± 0.025 mm
Others	MD, MC levers	Operation.....There shall exist no roughness, contact or touch, abnormal sound, etc.
	Lens removal and installation	Check removal and installation torque (light or heavy), lock, unlock, play.
	Back cover	Opening and closing...Back cover shall float spontaneously when the rewind knob is pulled up. There shall be no remarkable play when back cover is closed.
	Pressure plate	There shall be no distortion, protrusion, concave, foreign matter attachments, etc.
	Battery chamber	Contact There shall be no abrasion, corrosion, stains, etc.
	Compatibility with accessories	<ul style="list-style-type: none"> ● Interchangeability with Multi-Function Back (8744) <ul style="list-style-type: none"> --With 8744 installed, continuous shooting and camera control functions by 8744 shall be performed. ● Interchangeability with Motor Drive I (8740) and Auto Winder G (8731-200) <ul style="list-style-type: none"> --With 8740 and 8743 installed, check the functions.
Voltage regulations, etc.		<ul style="list-style-type: none"> ● Release lock voltage.....2.10 ± 0.15 V ● LED light-off voltage2.40 ± 0.15 V ● Current drain at LED lighting (at light measuring) ...12 mA or less ● Leak current at main SW. ON10 μA or less ● Leak current at main SW. OFF2 μA or less

TROUBLE-SHOOTING

1. Use of Trouble-shooting

This trouble-shooting chart describes symptoms and causes of troubles found on the camera side.

Even when trouble is found on the camera side, its cause is not always attributable to the malfunction of the camera in relation to the exchangeable lens, winder, motor drive and exclusive flash. Therefore, use this trouble-shooting chart upon confirmation of trouble on the camera after checking combined performance with the accessories according to claim contents.

2. Description

1. This Trouble Shooting Chart is classified mainly into PART I and PART II, which can be used properly depending your desire.

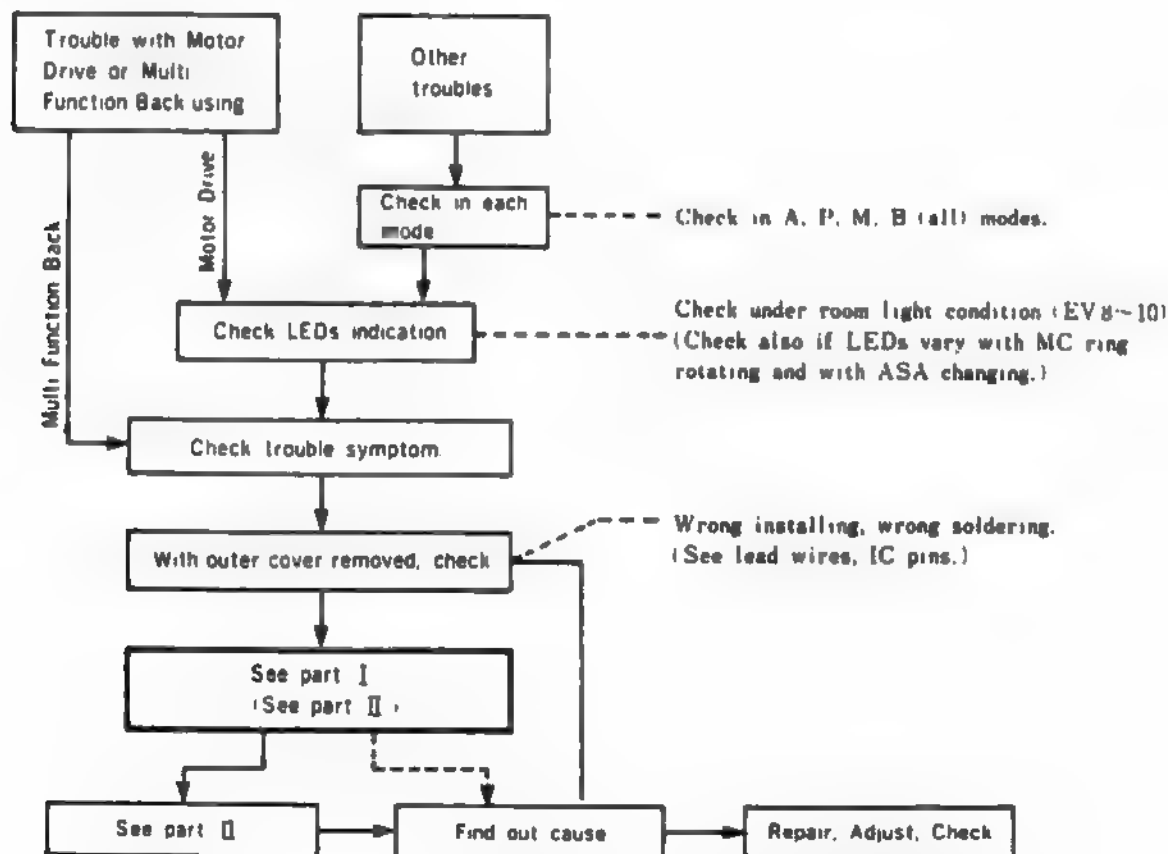

PART I

- Provides you with significant points of troubles (symptoms, causes), including contents for PART II.

PART II

- Provides you with detailed trouble causes, including proper measures, adjustments, and check points etc.
 - Also provides you with checking method by YES-NO answering so that you can find out cause easily.
2. Trouble described here is due to a single case only. Trouble due to a plurality of causes should be checked collectively on the basis of the causes listed in this chart.

3. Repair Procedure (With no LEDs lighting, first see next page to check battery power.)

- In case that trouble symptom is not re-occurred.

In case that trouble symptom is not re-occurred when checking trouble with about 50-shutter-releasing before repair ...

Find out cause against trouble symptom, which was pointed out by user, following PART 1, and check related parts.

4. Servicing Precautions

1. Check voltage using digital multi meter (but not necessarily when input impedance is more than 10M Ω).
2. Use circuit tester whose voltage is 3V or less to check circuit connection.
3. Trouble is most unlikely to occur in electronic parts, such as ICs, diodes, transistors, resistors, and capacitors. Therefore, check the cause of trouble, with the focus on the defective soldering of lead wires and electrical parts, and switching contacts.
4. When checking soldered or plated parts, avoid pressing the parts or pulling lead wires unnecessarily.
5. Since voltage measuring parts are narrow, mount a pin or something similar at the tip of an alligator clip for measurement.
6. When measuring switching patterns, special care should be taken so that the patterns out-side switch operation are free from flaws. For switch contacts, measure their base, which is not directly affected by contact pressure.
7. Be sure to turn off the power switch before removing electrical parts (when a constant-voltage regulated power supply is used).
8. The ideal temperature range for the soldering iron tip is 290°C to 340°C. If the temperature is higher, however, perform soldering quickly. Also, be sure to clean the tip when soldering.

5. Battery Capacity Check

1. A 100 Ω resistor is paralleled with the battery at normal temperature (25 \pm 2.5°C), as illustrated. A digital multimeter or voltmeter is connected to the battery in parallel to the resistor to measure the voltage. In this case, be sure to perform quick measurement.
2. The battery, with its voltage more than 1.1V, is regarded as normal.

F Mode indicator "M" lights up, operating as A mode with A mode setting.	28										25		
G Under-range LED "▽" blinks in P mode. LEDs light properly or show slower shutter speed (about 1 EV) in A, M, B modes.	28								6		14		
H Mode indicator "M" lights up, operating as P mode with P mode setting.	28										27		
I Mode indicator "P" remains ON, not blinking, with setting other than minimum aperture in P mode.	28	7-1	2K (Green)								24		
J Mode indicator "P" blinks with minimum aperture setting in P mode.	28												
K Mode indicator "P" remains ON, not blinking, with setting other than minimum aperture. Exposure-adjustment LED (+/-) does not light up. Metered SS LED does not change properly with ASA aperture changing.	28									14	25		

10. Operation failure using exclusive flash unit (AEF 280PX)

Symptom	Page	SW	Lead wire	VR	SL	R	C	IC-1	IC-2	IC-3	IC-4	IC-5	Others
A Flash does not fire. Shutter stays open.	29	11, 12	43, 44, 45 (Purple)										Hot shoe contact failure Sync terminal defect
B Flash does not fire. Shutter stays open. Main indicator and "60" LED (as FDC) blinks at 2 Hz with flash charged completely.	29		22, 34 (Black)										
C Shutter operation without slit even though flash fires with "60" LED (as FDC) blinking.	29							14					
D Always flash fires fully without blinking "60" LED (as FDC) (Time counter does not indicate correctly, long when checking stroke level.)	29		11 (Black) 23, 35, 36 (Purple)	6			7	9					SPC-B defect
E Always flash fires fully without blinking "60" LED (as FDC). Aperture stops down to minimum, without main indicator "P" lighting in flash P mode.	29		44, 45 (Grey)						31				F ₁ contact failure
F Flash firing is extremely in short time. (Time counter indication short.)	29					16 + 14	7	10, 11	40				SPC-B short-circuit
G "60" LED does not blink with flash fully charged. (Shutter speed does not change to 1/60 sec automatically.)	29		54, 55 (White)						25	25	26		F ₁ contact failure
H Always full aperture in flash P mode. Viewfinder LEDs are normal.	29			8	2	22		35	20, 20				SL-2 insufficient attraction
I Aperture cannot be controlled properly in flash P mode. Viewfinder LEDs are normal.	29	7-2 7-3	14, 15 (Red) 25, 26 (Yellow)						12, 13				
J "60" LED (as FDC) does not blink. Always full aperture in flash P mode.	31								39				
K Flash firing is not controlled correctly.	31		4-2 (Black)										SPC-B shutter operation failure
L Flash fires but with slow sync in A, P, M modes.	31								38				
M Flash firing is controlled automatically, blinking "60" LED (as FDC) in M mode.	31												Joint ④ disconnection
N Main indicator "P" does not indicate in flash P mode.	31								28		29		
O Flash unit is not charged.	31	+ 12	+ 53, 44 (51 Purple)										Hot shoe pins short-circuit or error in radiation chain F ₁ and F ₂ short-circuit or sync terminal short-circuit

11. Operation failure using Motor Drive 1 (MD-1).

Symptom	Page	SW	Lead wire	VR	SL	R	C	IC-1	IC-2	IC-3	IC-4	IC-5	Others
A Shutter is not released by MD-1.	32		46 (Grey)										W ₁ contact failure
B No LEDs light when using MD-1.	32		71 (Brown)							1			W ₁ contact failure W ₁ pin riveting failure
C Winding is impossible by MD-1.	32		+ 21, 21 (Blue)							12			W ₁ contact short-circuit with GND W ₁ contact failure

12. Operation failure using Multi Function Back (MFB).

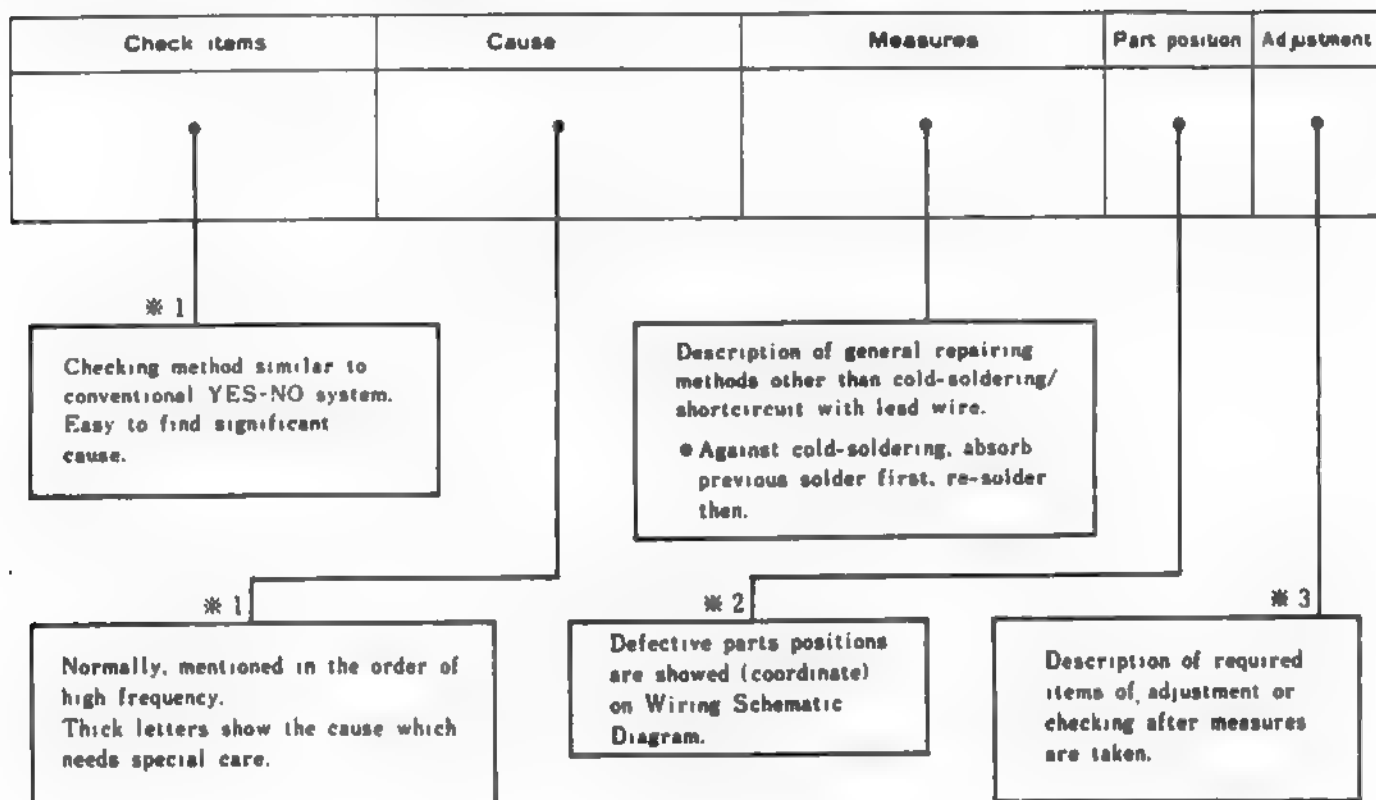

Symptom	Page	SW	Lead wire	VR	SL	R	C	IC-1	IC-2	IC-3	IC-4	IC-5	Others
A Data is not imprinted.	32		34, 30, 42, 43 (White) 12-2 (Red)			+ 27 28				28			Q ₁ defect or disconnection
B Shutter is not released by MFB.	32		23, 46 (Grey)										
C Shutter is released when returning film advance lever, with MFB using.	32												f ₁ (Grey) and f ₂ (Black): wrong soldering
D Data is imprinted after 2nd shutter curtain travels completely.	32												f ₁ (Blue) and f ₂ (White): wrong soldering
E Data is imprinted by changing mode switch ON-OFF-ON slowly.	32												Circuit disconnection (Needling P.C. board C)

13. Leak current trouble.

Symptom	Page	SW	Lead wire	VR	SL	R	C	IC-1	IC-2	IC-3	IC-4	IC-5	Others
A Battery drains sharply (Excessive leak current). Camera operation is normal.	34						8, 9 10						

2 Trouble-shooting chart PART II

■ Description of Trouble-Shooting Chart PART II

※ 1 ● Flex P.W. number and joint part symbol, for voltage check, are the same as that on the Wiring Schematic Diagram.

● Voltage should be checked after winding up completely, with body connected to GND and metering switch (S_0 or S_1) turned ON.

※ 2 Find the part position by coordinate on the Wiring Schematic Diagram-D even though 4 Wiring Schematic Diagrams, A~D, are available.
(For the Wiring Schematic Diagram other than -D, symbol ④, ⑤, or ⑥ is described.)

※ 3 By numbers and symbols, find out the relevant adjustment items using the following table, perform the adjustment and checking referring Service Manual Repair Guide.

■ Items for adjustment, checking after defective parts repaired

- When replacing flex P.C. board set, perform the marked (○) adjustment/checking in the A column.
- When replacing shutter block, perform the marked (△) adjustment/checking in the B column.

Number on adjustment column in the Symbol Trouble-Shooting Chart			Items for adjustment, checking	Page on Repair Guide
A	B	Number		
			Body, winding unit	
		1	Sprocket gear positioning	2
		2	Winding gear positioning	4
		3	Film counter operation gear positioning	5
		4	Reversion stop lever stop timing adjustment	4
		5	Overrun eccentric pin adjustment	6
		6	Sprocket claw position check	7
		7	Reversion stop lever timing check	7
		8	Winding operation lever timing check	7
			Shutter operation	
		9	Shutter gear position adjustment	13
		10	Shutter charge adjustment	13
		11	Shutter curtain position check	35, 36
		12	Mirror magnet attraction check	10
		13	Release lock voltage check	31
		14	Synchro X time lag	38
			Shutter speed	
		15	Curtain speed adjustment	24, 38
		16	Manual SS adjustment	24, 38
			Auto exposure	
		17	Metering offset adjustment	22
		18	ASA inclination adjustment	22
		19	A-auto level adjustment	25
		20	Aperture magnet, release magnet attraction check	10
		21	Check of A mode and P mode (EE, SS)	30
		22	Check of limits at high and low shutter speeds	31
		23	Strobe level adjustment (strobe auto)	27
		24	Bending point level adjustment (strobe auto)	29
			LED indication	
		25	MD lever position adjustment	19
		26	LED position adjustment	20
		27	LED indication adjustment	26
		28	LED OFF-voltage check	31
			Viewfinder, focusing	
		29	Body back adjustment	17
		30	Finder back adjustment	18
		31	Mirror angle adjustment	41
		32	F No. infinder adjustment	20

1. Shutter is not released.

① Shutter is not released in any mode.

- A.** Viewfinder LEDs light up properly with touch switch (S₁) ON. With release switch (S₂) ON LEDs go off, and light up properly again with touch switch ON after changing main switch (S₃) ON→OFF→ON. (Incl. "Mirror stays up".)

Check items	Cause	Measures	Part position	Adjustment
	Mechanical trouble	See P 12		
These causes are not applied to body whose circuit base plate B has IC-6.	S ₁ : contact failure	Clean S ₁ , or replace wiring base plate set (0267) and trigger contact (2166)	M-3	16, 19, 27
	P ₂₀ (Orange) disconnection IC-3(7) disconnection	Replace shutter block.	K-3	8

- B.** Shutter is released only once each time changing main switch (S₃) ON→OFF→ON. Viewfinder LEDs light up properly with touch switch (S₁) ON when winding up completely, but go off when releasing shutter.

Check items	Cause	Measures	Part position	Adjustment
	S ₁ : contact failure	Clean adjust S ₁ bending. Adjust winding stop lever-A set (0312) operation.	E-1	
	P ₁₇ (Yellow), P ₁₈ (Yellow): disconnection		E-2	
	R ₁₂ : disconnection (By depressing operating button quickly, shutter may be released.)		H-3	
	IC-3(3): disconnection			

- C.** By release switch (S₂) ON, preset lever travels, but not return to original position. Viewfinder LEDs light up properly with touch switch (S₁) ON, and go off with release switch (S₂) ON. But they light up properly with touch switch ON after touch switch OFF.

Check items	Cause	Measures	Part position	Adjustment
Shutter is released when connecting lead wire (Green) of SL-3 with body (GND) by battery. See figure below	Yes → C ₁ : cold soldering or shortcircuit or defect Joint R disconnection IC-5(2) or (10): disconnection IC-3(3): disconnection IC-5: defect	Replace C ₁ or re-solder	B-7	
	No → SL-3 (0523): dirt or defect	Clean attraction surface or replace mirror magnet set (0523).	N-4	20
	Lead wire (Green) of SL-3 (0523) disconnection	Re-solder or connect lead wire Replace SL-3 (0523)	M-4	20

Disconnect SL-3 lead wire (Green), connect it to + end of DC power supply (output: 1.8V). Shutter releasing, when contacting + end of DC power supply to GND as shown in left figure after winding completion, means "YES".

- D. Shutter can be released by remote control switch (S₁₂). Viewfinder LEDs light up properly with touch switch ON, but remain ON even with release switch ON.

Check items	Cause	Measures	Part position	Adjustment
	f ₁₁ (Green): disconnection		K-6	
	f ₁₀ (Grey): disconnection		K-4	
	S ₂ : contact failure (See P. 38)	Replace shutter dial base plate set (0274).	J-4	

- E. Shutter is not released neither by release switch (S₁) ON nor by remote control switch (S₁₂) even with main switch (S₀) changing ON—OFF—ON. Viewfinder LEDs light up properly with touch switch ON, but do not go off even with release switch.

Check items	Cause	Measures	Part position	Adjustment
Check voltage of flex P.W.Ⓢ (f ₁₇ (Yellow)). Winding completely 1.5V or more After shutter release 0V Yes	Mechanical trouble S ₁ : remains ON. (See P. 38) f ₁₇ (Yellow), f ₁₀ (Yellow) and GND: shortcircuit Lead wire (White) of SL-1 and f ₁₇ (Yellow) shortcircuit Flex P.W.Ⓢ and top cover: shortcircuit (With top cover removed, camera operates normally.)	See P. 12 Adjust operation of winding stop lever A set (0312), bending of contact or so. Re-solder or replace connecting P.C. board (0425). Re-solder or stick isolation tape.	E-1 D-5 E-2 D-5	
	IC-3(2): disconnection f ₁₅ (Red): disconnection f ₁₄ (Grey): disconnection Q ₃ : cold soldering or defect R ₁₀ : cold soldering or defect		ⓈI-6 ⓈJ-6 ⓈI-5 ⓈJ-5	

Only for body with P.C. board A employed.

- F. Shutter is released when keeping operating button depressed for about 5 sec. Viewfinder LEDs light up when keeping operating button depressed for 2~3 sec.

Check items	Cause	Measures	Part position	Adjustment
	XL legs: cold soldering or shortcircuit		I-7	
	XL: defect	Replace XL.	I-7	
	IC-3Ⓢ or Ⓢ: disconnection			

② Shutter is not released and no viewfinder LEDs light up in any mode.

G. Excessive current flows using DC power supply (Battery drains sharply)

Check items	Cause	Measures	Part position	Adjustment
Excessive current flows with S_6 ON. (Normal in OFF position)	Shortcircuit between GND and lead wire (Red) of BZ		J- 8	
	Shortcircuit between GND and F_{30} (Red)		L- 3	
	Shortcircuit between GND and F_{32} (Red)		K- 4	
	Shortcircuit between GND and F_{36} (Red)		H- 1	
	Shortcircuit between GND and F_{33} (Red)		Ⓒ1- 6	
	Shortcircuit between GND and F_{30} (Red)		A- 3	
Excessive current flows with S_6 ON. (Normal with S_6 ON)	Shortcircuit between GND and F_{12-2} (Red)		G- 7	
	Shortcircuit between GND and F_{30} (Red)		ⒸG- 7	
	IC-1 (Ⓓ) and (Ⓔ) disconnection			

H. Power is not supplied using DC power supply.

Check items	Cause	Measures	Part position	Adjustment
Check voltage between lead wire (Red of SL-4) - (P W Ⓓ) and GND 3V	Check voltage connecting P. C board P W Ⓓ 3V	Contact failure in battery chamber F_{30} (Red): disconnection	H- 1	
	Check voltage of LED P C board P W Ⓓ 0V			
Yes	Yes	F_{30} (Red): disconnection		
	No (About 50mV)	S_6 : contact failure (See P.39) Joint Y: disconnection Joint (D): disconnection Joint (C): disconnection	M- 6	
Check voltage of C_2 - (GND) 0V	Yes	F_3 (Black): disconnection Joint V: disconnection	A- 4	
	No (About 50mV)	IC-5 (Ⓓ): disconnection IC-3 (Ⓓ): disconnection		

③ Others.

I. Shutter is not released continuously (Needing 2~5 sec. for next shutter releasing). Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	IC-5 (Ⓓ) disconnection			

J. Shutter is not released by remote control switch (S_{13}). (Normal operation with operating button depressing). Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	S_{13} : contact failure (See P.40)	Clean or replace S_{13} .	F- 6	
	F_6 (Grey) disconnection		E- 6	
	F_6 (Black) disconnection		F- 6	

■ Shutter mechanism failure (Shutter is not released)

A. When returning film advance lever after winding completion, shutter curtains also return to original position (uncharged position).

Check items	Cause	Measures	Part position	Adjustment
	Under-charge	Adjust shutter charging		10
	Winding shaft (0338): riveting loosens	Replace winding shaft		

B. Shutter curtain does not travel completely (metal part is visible).

Check items	Cause	Measures	Part position	Adjustment
Shutter curtains cannot be travelled completely. Next winding is possible after 2nd curtain pushed. Yes No	2nd shutter curtain cannot be travelled completely	See #1 on next page.		
	Ribbon: disengagement	See #2 on next page.		
	Ribbon: catching 1st shutter curtain brake defect	See #2 on next page. Replace shutter block		B

C. Charge coupler does not return with winding completion.

Check items	Cause	Measures	Part position	Adjustment
	Winding operation lever set operation failure.	See #3 on next page.		7, 8

D. Others

Check items	Cause	Measures	Part position	Adjustment
Mirror stays up.	SL-3: insufficient attraction	Clean attraction surface, or replace SL-3.	N-4	12
	Charge lever (3010): bending	Adjust or replace.		
	Charge lever: disengagement from charge lever roller (9443).	Adjust or replace charge lever, or charge lever roller		
	Mirror holder set: riveting pin is out of position.	Replace mirror holder.		30, 31 19, 21
	Mirror holder: foreign part in it	Remove foreign part.		30, 31 19, 21
	MP return lever set (0256): stopping failure (See figure below)	Adjust 0256 looseness, or replace 0256, or mirror box set.		30, 31 19, 21
	MP return lever: looseness of riveted shaft (See figure below)	Replace mirror box set.		30, 31 19, 21

*** 1. 2nd curtain does not travel completely.**

- Use 3 washers (t=0.2mm) between front base plate and shutter block installing position to prevent the catching of MP return lever shaft and shutter cover plate.
- Stick the shutter light shield plate as illustrated because there is possibility of light leakage when using washers.

*** 2. Disengagement or catching of shutter ribbon.**

- Replace with new shutter block, however, repair as following method for minor trouble.
- Use ribbon guide plate-B to prevent the 1st curtain catching with 2nd curtain shutter gear.

*** 3. Measures against operation failure of winding operation lever.**

- Clean the winding operation lever and the holder.
- Adjust the spring (3416) shape or replace it.

2. Shutter is released when returning film advance lever.

A. Shutter is released when returning film advance lever.

Check items	Cause	Measures	Part position	Adjustment
Shutter is not released when returning film advance lever with ϕ Grey on flex disconnected	No f_{10} (Grey) and GND: shortcircuit S_2 and GND: shortcircuit (See P. 38)	Replace shutter dial base plate set (0274).	K-4	
Shutter is not released when returning film advance lever (flex with ϕ Grey) on disconnected	No S_{12} and GND shortcircuit (See P. 40) f_{12} (Grey) and GND: shortcircuit Remote control terminal: shortcircuit	Replace remote control terminal (0153).	E-6 E-6	
Yes	W_2 (connecting P.C. board) and GND shortcircuit	Re-solder.		

3. Shutter operation failure.

① Shutter stays open.

A. Shutter stays open in A, P, M, B modes. (L: no good) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
Check battery consumption.	While metering (with S_2 ON) About 21.5mA f_{11} (White) and GND: shortcircuit C_{11} : shortcircuit	Replace C_{11} .	L-5 G-4	
While metering (with S_2 ON) About 9~13.5mA (normal)	IC-1 ⑩: disconnection IC-3 ②: disconnection			

B. Shutter stays open in A, P, M, B modes. (L: no good) Only "M" lights up for mode indication. "Δ" blinks for metered shutter speed.

Check items	Cause	Measures	Part position	Adjustment
	Joint E: disconnection IC-2 ⑬: disconnection			

C. Shutter stays open in A, P, M, B modes unless touch switch (S_3) OFF; finger off operating button. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	S_1 remains ON, or shortcircuit between S_1 and GND. (See P. 38) f_{10} (Orange) and GND: shortcircuit	Adjust or replace S_1 .	M-3 K-3	16. 19
Only for body with circuit base plate B employed.	R_N or R_B : disconnection f_{10} (Blue): disconnection IC-6 ⑪: disconnection		⑥ G-7	

D. Shutter stays open in A, P, M modes. (L: good) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
<div>Check voltage of C_5 + 0.9~1.35 V with S_2 ON (normal)</div> <div>Yes</div> <div>No</div>	C_4 or C_5 : disconnection or defect	Re-solder or replace.	G-6	19, 27
	C_6 : shortcircuit	Replace C_6 .	F-8	19, 27
	IC-1 ⑩: disconnection			
	IC-2 ⑭: disconnection			

E. Shutter stays open in A, P, M modes. (L: good) (But shutter operates almost normal when LED shows 1/15~1/1000 sec.) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	C_6 defect	Replace C_6 .	F-8	19, 27
	C_5 : defect	Replace C_5 .	G-6	19, 27

F. Shutter stays open or slow shutter speed in A, P modes. (L: good) Under-range LED "▽" blinks in any mode, or slower shutter speed indicates in M mode.

Check items	Cause	Measures	Part position	Adjustment
<div>Check voltage of C_6 +</div> <div>0.05 V or less</div> <div>0.05~0.12 V</div> <div>2.0 V or more</div> <div>0.12~2.0 V</div> <div>Check voltage of Q_2 collector About 55 mV</div> <div>Yes</div> <div>No</div>	VR ₁₀ : disconnection or contact failure	Re-solder or replace VR ₁₀ .	G-6	18, 19, 27
	f_8 (Brown) and GND: shortcircuit		E-4	
	f_9 (Brown) and GND: shortcircuit		E-8	
	IC-1 ⑪: shortcircuit			
	VR ₁ : disconnection or contact failure	Re-solder or replace VR ₁ .	F-7	19, 27
	IC-1 ③ or ④: disconnection			
	IC-1 ⑥: disconnection			
	f_{25} (Purple): disconnection		G-8	
	f_{33} (Green): disconnection or shortcircuit with GND		J-9	
	Q_2 : disconnection of emitter or collector	Re-solder.	I-9	
Yes	Q_2 and GND: shortcircuit	Re-solder.	I-9	
	Q_2 : defect	Replace	I-9	
	R_2 : defect or disconnection	Re-solder or replace.	I-9	
	IC-1 ⑨: disconnection			
	AV (VR ₂): contact failure or shortcircuit with GND.	Clean AV (VR ₂), re-solder, or adjust.	H-2	19, 27
	f_{18} (Orange): disconnection		C-8	
	f_1 (Black): disconnection		G-8	
	SPC-A: cathode disconnection or defect	Re-solder or replace.	H-9	19, 27
	SPC-A: shortcircuit between anode and cathode	Re-solder.	H-9	
	f_{21} (Blue): disconnection or shortcircuit with GND		E-2	
	R_{17} : disconnection		H-9	
	C_{12} : shortcircuit	Replace C_{12} .	G-7	
	IC-1 ⑩: disconnection			

G. Shutter stays open in A, P modes. (L: good) Under-range LED "▽" blinks in P, M, B modes (Normal in A mode).

Check items	Cause	Measures	Part position	Adjustment
	C ₂ ①: shortcircuit with GND	Re-solder.	H- 9	

H. Shutter stays open in A, P modes (L: good). Under-range LED "▽" blinks in P mode (Normal in A, M, B modes)

Check items	Cause	Measures	Part position	Adjustment
	r ₂₅ (Grey): shortcircuit with GND. IC-2 ⑬: disconnection		H- 8	

I. Shutter stays open in A, P modes (L: good) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	C ₃ legs. shortcircuit	Re-solder or adjust.	G- 6	

J. Shutter stays open with AE locked in A, P modes. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	r ₂₅ (Grey): disconnection		H- 8	
	C ₂ : disconnection		H- 9	
	r _{h-2} (Black): disconnection		I- 9	
	IC-2 ⑬: disconnection			

K. Shutter stays open occasionaly or slower shutter speed in P mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	SL-2: excessive over-charge	Replace magnetic release base plate (0534)	D- 1	20

L. Shutter stays open in "M" mode. Over-range LED "△" blinks in any mode.

Check items	Cause	Measures	Part position	Adjustment
<div style="border: 1px solid black; padding: 2px; display: inline-block;">Check voltage of IC-1 ⑩</div> <div style="display: inline-block; vertical-align: middle;"> <div style="margin-bottom: 5px;">About 1.4V →</div> <div style="margin-bottom: 5px;">2.5V or more →</div> <div style="margin-bottom: 5px;">0.2V or less →</div> </div>	Joint ⑧: disconnection			
	IC-1 ⑪: disconnection			
	IC-1 ⑫: disconnection			

M. Shutter stays open in M mode. (AE is slightly over in A, P modes). Under-range LED "▽" blinks, or slow shutter speed indicates in A, M, B modes. Viewfinder LEDs indicate slower shutter speed in P mode.

Check items	Cause	Measures	Part position	Adjustment
	Joint ⑥: disconnection			

N. Shutter stays open in M mode. (L: good) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	TV contact (VR ₁): contact failure.	Clean and adjust contact.	M- 7	16, 19
	Joint ⑧: disconnection			
	IC-2 ⑬: disconnection			

O. Shutter stays open at one of shutter speed settings in M mode. Viewfinder LEDs are normal

Check items	Cause	Measures	Part position	Adjustment
	TV VR ₁ dirt on surface	Clean.	M-7	16, 19
	TV contact deformation	Adjust contact bending.	M-7	16, 19

② Shutter curtains travel in high speed, or without slit.

A. Shutter curtains travel without slit in A, P, M, B modes. No viewfinder LEDs light up in any mode

Check items	Cause	Measures	Part position	Adjustment
Power is not supplied with S ₄ ON.	Joint U disconnection Joint W disconnection Joint X disconnection IC-5 3 disconnection IC-5 8 disconnection IC-1 5 disconnection			
About 80mA flows with S ₄ ON.	C ₁ and top cover GND shortcircuit	Check top cover isolation sheet, re-solder.	H-7	23
About 8mA flows with S ₄ OFF	(3) Red and GND shortcircuit		8 1-6	

B. Shutter curtains travel without slit in A, P, M, B modes. Sometimes with slit. Over-range LED "Δ" blinks and mode indicator "M" lights up in any mode

Check items	Cause	Measures	Part position	Adjustment
	IC-2 1 ² disconnection IC-1 15 disconnection			

C. Shutter curtains travel without slit in A, P, M, B modes. Sometimes with slit. Viewfinder LEDs other than mode indicator do not light up

Check items	Cause	Measures	Part position	Adjustment
	IC-3 4 disconnection			

D. Shutter curtains travel without slit in A, P, M, B modes. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
Shutter stays open when releasing with flex P.W. 0031. White shortcircuited with GND.	No → 2nd curtain stopper failure	Replace shutter or 2nd curtain stop lever set 0029.		B
	Shutter under-charge	Adjust amount of shutter charge.		10
Yes ↓	SL-4 dirt on attraction surface or defect	Clean shutter magnet, or replace shutter.	N-2	B
	(3) Red disconnection (11) White disconnection		K-4 L-5	
Check voltage of IC-2 1 ² at 1/30 shutter dial setting. About 1.2V	No → S ₄ contact failure	Clean or adjust contact bending.		
	TV contact contact failure	Clean or adjust contact bending.	M-7	16, 19
Yes ↓	TV P.C. board defect	Replace flex P.C. board set 0401	M-7	A
	IC-1 1 ¹ , 13, 15, 21 disconnection IC-2 1 ² disconnection IC-1 2 ² , 23 disconnection			

E. Shutter curtains travel without slit in A, P, M, B modes. (In A, P, M modes, for 1/30-1 sec shutter approx. 20ms slower.) Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
Only for body with circuit base plate B employed.	IC-1 ⑬: disconnection		⑬ G-7	
	f ₁₀ (Red): disconnection		⑬ H-7	
	f ₁₁ (Yellow): disconnection		K-7	
	f ₁₀ (Orange): disconnection		⑬ G-7	
	f ₁₀ (Black): disconnection			
	IC-6 ⑦: disconnection			
	IC-6 ⑨: disconnection			
	IC-6 ⑪: disconnection			
	IC-6 ⑬: disconnection			

F. Shutter curtains travel in high speed in A, P, M modes. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	C ₄ : disconnection or defect	Re-solder or replace.	F-8	19, 21
	IC-1 ⑨: disconnection			

G. Shutter curtains travel in high speed in A, P modes. Over-range LED "Δ" blinks or LEDs show faster shutter speed in any mode

Check items	Cause	Measures	Part position	Adjustment
<div style="border: 1px solid black; padding: 2px; display: inline-block;">Check voltage of IC-1 ⑮</div> <div style="margin-left: 20px;"> <p>→ About 2 HV</p> <p>→ About 14-20V</p> </div>	ASA contact (VR ₁): contact failure	Clean or adjust contact.	B-8	19, 21, 27
	f ₁ (Brown): disconnection		E-8	
	f ₁₁ (Red): disconnection		D-8	
	f ₁₁ (Red) and GND: shortcircuit (There is a possibility of LED "▽" blinking.)		D-8	
	IC-1 ⑤: disconnection			
	f ₁₄ (Orange): disconnection		E-8	
	f ₁ (Black) and GND: shortcircuit		G-8	
	f ₂ (Black) and GND: shortcircuit		G-9	
	Cathode of SPC-A and GND: shortcircuit		H-9	
	Cathode of SPC-B and GND: shortcircuit		E-10	
	SPC-B and SPC-B cover: shortcircuit		E-10	

H. Shutter curtains travel in high speed in A, P modes. Under-range LED "▽" blinks, or LEDs show slower shutter speed in A, M, B modes. In P mode LEDs show slower shutter speed.

Check items	Cause	Measures	Part position	Adjustment
	ASA contact (VR ₁): contact failure	Clean or adjust ASA contact.	B-8	19, 21, 27
	f ₁ (Brown): disconnection		E-4	
	f ₁₄ (Orange) and GND: shortcircuit		E-3	
	f ₁₃ (Orange) and GND: shortcircuit		C-8	

I. Shutter curtains travel in high speed in A mode. Mode indicator "M" lights up in A mode.

Check items	Cause	Measures	Part position	Adjustment
	S ₅₋₁ : contact failure (See P. 38) Joint ②: disconnection	Clean or adjust contact.	N-6	

J. Shutter curtains travel in high speed in A mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ④: disconnection			

K. Shutter curtains travel in high speed in P mode. Under-range LED "▽" blinks only in P mode.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ③: disconnection			

L. Shutter curtains travel in high speed in P mode. Mode indicator "M" lights up in P mode.

Check items	Cause	Measures	Part position	Adjustment
	S ₄₋₂ : contact failure (See P. 38) Joint ③: disconnection	Clean or adjust contact.	M-6	

**M. Shutter curtains travel in high speed in M mode. Under-range LED "▽" blinks in any mode.
(Full aperture in P mode)**

Check items	Cause	Measures	Part position	Adjustment
	VR ₂ : disconnection (contact failure) Joint ①: disconnection IC-1 ⑤: disconnection	Re-solder, clean or replace flex P.C. board set (0401).	M-7	A

N. Shutter curtains travel in high speed in M mode. Over-range LED "△" blinks in any mode.

Check items	Cause	Measures	Part position	Adjustment
	VR ₂ : the both ends are short-circuited.	Re-solder.		27

O. Shutter curtains travel in high speed (or 1 sec. shutter opening occasional) in B mode. Viewfinder LEDs are normal.

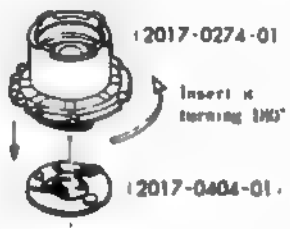

Check items	Cause	Measures	Part position	Adjustment
	S ₅₋₁ : contact failure (See P. 38) Joint ①: disconnection IC-3 ④: disconnection	Clean or adjust contact.	M-6	

③ Others.

A. Partly shutter speed failure in M mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	TV contact (VR-1): deformation	Adjust contact or replace TV contact holder set (0404).	M-7	16, 19, 27
	TV resistor (resistor value defect)	Replace flex P.C. board set (0401).	M-7	A

- B.** Shutter speed 1/1000 and 1/500 sec. become 1 sec., and 1-250 sec. become 1/1000 sec. in M mode.
Viewfinder LEDs are normal. (AE is over in A mode. Normal in P mode.)

Check items	Cause	Measures	Part position	Adjustment
	TV contact holder set (0404) wrong installing	See left figure.		16, 19, 27

- C.** Shutter speed becomes slower under bright conditions, faster under low light condition in M mode.
Viewfinder LEDs are normal. (AE is over in A, P modes.)

Check items	Cause	Measures	Part position	Adjustment
	IC-1 ③: disconnection IC-2 ④: disconnection			

③ Auto exposure error in A, P modes.

A. AE over in A, P modes.

Check items	Cause	Measures	Part position	Adjustment
	Adjustment failure	Readjust following "Repair Guide" P. 21~P. 25.		
	F ₁₅ (Orange): disconnection VR ₁ : disconnection VR ₂ by IC-1 ②: disconnection VR ₃ : contact failure R ₂₃ : disconnection R ₁₉ : disconnection IC-1 ②: disconnection IC-1 ⑦: disconnection IC-2 ⑤: disconnection IC-3 ③: disconnection	Clean or replace VR ₁ .	C- 8 F- 7 Ⓐ F- 7 Ⓐ F- 7 F- 7 G- 7	19, 27 17, 19, 27
	Others: See "Shutter stays open in A, P modes".			

B. AE under in A, P modes.

Check items	Cause	Measures	Part position	Adjustment
	Adjustment failure	Readjust following "Repair Guide" P. 21~P. 25.		
	VR ₁ : the both ends are short-circuited. VR ₂ (IC-1 ① side): disconnection R ₂ : disconnection IC-1 ①: disconnection IC-1 ⑥: disconnection IC-1 ⑤: disconnection IC-2 ⑨: disconnection	Re-solder or replace VR ₁ .	F- 7 Ⓐ F- 7 G- 6	19, 27 17, 19, 27
	Others: See "Shutter curtains travel in high speed".			

4. Diaphragm stop operation failure.

A. Full aperture in A, P, M, B modes. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
Check voltage of C ₁₀ 3.0V	SL-1: defect (See P. 41)	Replace magnetic release base plate (0534).	C-1	20
Yes	SL-1: lead wire (Green or White) disconnection	Connect lead wire or magnetic release base plate (0534).	C-1	20
No	SL-1: insufficient attraction.	Replace magnetic release base plate (0534).	A-2	20
Only preset lever operates by shortcircuit between C ₁₀ + and GND	SL-2: dirt on attraction surface.	Clean attraction surface.	D-1	20
Yes	SL-2: insufficient attraction.	Replace magnetic release base plate (0534).	D-1	20
No	C ₁₀ : disconnection		A-2	
See figure below	Check voltage of LED P.C. board P W ⑩ (Purple) 2.8V			
Yes	⑩ (Purple): disconnection		B-4	
No	C ₁₀ : shortcircuit	Re-solder, or replace connecting P.C. board (0425).	A-2	
⑩ Short-circuit using tweezers or so.	⑩ (Purple) and GND: shortcircuit		B-4	
	IC-5 ⑤: disconnection			
	IC-5: defect	Replace IC-5.		
Check voltage of IC-2 ⑤ About 2.8V	IC-5 ⑤: defect			
Yes	Joint S: disconnection			
No	IC-3 ⑤: disconnection			
	IC-2 ⑤: disconnection			

B. Full aperture in P mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	⑩ (Orange): disconnection		I-9	
	C ₃ →: disconnection		I-9	
	IC-2 ②: disconnection			

C. F-stop does not function in P mode. Viewfinder LEDs are normal. Full aperture under dark conditions (about EV 7 or less). Stop down to min. aperture under bright conditions (about EV 7 or more).

Check items	Cause	Measures	Part position	Adjustment
Check if SL-2 is separated by applying 1.8 V after SL-1 separation. See figure below Yes	SL-2: lead wire (Brown or Black) disconnection SL-2: defect (See P. 41) Aperture stop claw spring: disengagement	Connect lead wire. Replace magnetic release base plate (0534). Replace magnetic release base plate (0534). Connect spring (5137)	D-1 D-1 D-1	 20 20
Check if SL-2 is separated by shortcircuit between IC-5 ⑨ and GND after SL-1 separation Yes	No f ₁₃ (Orange): disconnection f ₁₃ (Orange) and GND: shortcircuit C ₅ : disconnection IC-5 ⑨: disconnection		B-3 B-3 C-7	
Check voltage of C ₅ 0 V Decreasing voltage from 1 V little by little Yes	No f _{h-2} (Black): disconnection P.W. on SPC P.C. board: disconnection Yes C ₅ and GND: shortcircuit Joint T: disconnection IC-2 ②: disconnection IC-2 ③: disconnection IC-2 ④: disconnection IC-5 ④: disconnection IC-3 ⑦: disconnection IC-3 ⑧: disconnection	Connect P.W. Replace SPC P.C. board (0436).	I-9 H-9 H-9 I-9	 17, 18, 19 21, 27

1. Disconnect SL-2 lead wire (Black, Brown), connect it to DC power supply with switched OFF.
2. After winding completion, make short-circuit at marked (*) positions as shown in left figure using tweezers so that SL-1 is separated.
3. When you could hear clicking sound with DC power supply switched ON, SL-2 should be separated.

D. Smaller aperture (about 2 EV) in P mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ②: disconnection IC-3 ③: disconnection			

E. F-stop functions in A mode. Mode indicator "A" lights up in P mode.

Check items	Cause	Measures	Part position	Adjustment
 A mode P mode	A and P modes printed wirings (on TV P.C. board): shortcircuit.	Re-solder.	M-7	21

5. Self-timer operation failure.

A. Self-timer does not operate. (Self-timer does not delay shutter release.)

Check items	Cause	Measures	Part position	Adjustment
Check if self-timer operates by shutter releasing after shortcircuit between flex P.W. ⑧ (Blue) and GND	No → f_{42} (Blue): disconnection	Clean or adjust contact. Tighten screw.	L-6	
	S_{10} : contact failure (See P. 39)		M-3	
	Self-timer plate screw: looseness.		M-3	
Yes →	IC-3 ⑦: disconnection			

B. Self-timer operates always.

Check items	Cause	Measures	Part position	Adjustment
	S_{10} : remains ON (See P. 39)	Re-solder or adjust contact.	M-3	
	f_{42} (Blue) and GND: shortcircuit		L-6	

C. Self-timer operates without LED blinking.

Check items	Cause	Measures	Part position	Adjustment
Self LED lights up by shortcircuit between flex P.W. ⑨ (Black) and GND	No → Self LED: cold soldering or defect	Re-solder, or replace LED.		
	f_{23} (Black) or f_{24} (Red): disconnection		L-3	
Yes →	R_4 : disconnection		H-7	
	IC-1 ④: disconnection			
	IC-1 ⑤: disconnection			
	IC-3 ⑬: disconnection			

D. Self-timer LED remains ON with main switch (S_1) ON.

Check items	Cause	Measures	Part position	Adjustment
	C_5 1 and R_4 : shortcircuit	Adjust bending of C_5 legs, or re-solder.	G-6	
	f_{23} (Black) and GND: shortcircuit		L-3	

6. AE lock failure.

A. Unlocked.

Check items	Cause	Measures	Part position	Adjustment
	S_{14} : contact failure (See P. 40)	Clean or adjust contact.	M-3	
	f_{24} (Yellow): disconnection		L-7	
	IC-3 ⑩: disconnection			

B. AE remains locked.

Check items	Cause	Measures	Part position	Adjustment
	S_{14} remains ON, or shortcircuit between S_{14} and GND. (See P. 40)	Re-solder or adjust contact.	M-3	
	f_{24} (Yellow) and GND: shortcircuit		L-7	

C. With AE locked (S₁₁ ON), shutter stays open in A, P modes.

Check items	Cause	Measures	Part position	Adjustment
	P ₁₁₋₂ (Black): disconnection P ₁₂ (Grey): disconnection C ₁ : disconnection IC-2 ⑬: disconnection		I- 9 H- 8 H- 9	

D. With AE locked (S₁₁ ON), viewfinder LEDs indication is held and shutter speed varies according to light condition.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ⑭: disconnection IC-3 ⑮: disconnection			

7. Piezo buzzer failure

A. No beeping for slow-shutter-speed warning, for self-timer.

Check items	Cause	Measures	Part position	Adjustment
	Black lead wire on buzzer: disconnection or shortcircuit with GND. Red lead wire on buzzer: disconnection Joint ⑯: disconnection IC-3 ⑰: disconnection		J- 8 J- 8	

B. No beeping for slow-shutter-speed warning. (Normal for self-timer)

Check items	Cause	Measures	Part position	Adjustment
	IC-3 ⑱: disconnection IC-4 ⑲: disconnection			

8. Shutter lock failure.

A. Viewfinder LEDs remain ON with 2.4 V, and OFF with 2.05 V.

Check items	Cause	Measures	Part position	Adjustment
	IC-1 ⑳: disconnection IC-3 ㉑: disconnection			

B. Shutter lock does not operate with 2.05 V/locks with 1.4 V.

Check items	Cause	Measures	Part position	Adjustment
	IC-1 ㉒: disconnection IC-3 ㉓: disconnection			

9. Viewfinder LED indication failure.

In case that other troubles (Shutter is not released. Shutter stays open. Shutter curtains travel in high speed, or without slit. F-stop operates improperly.) are accompanied refer to the related pages.

① No lighting LED.

A. No LEDs light.

Check items	Cause	Measures	Part position	Adjustment
	Insufficient battery voltage IC-4 9: disconnection	Replace batteries		

B. No LEDs light with touch switch (S₂) ON. LEDs light up with release switch (S₁) ON after shutter release

Check items	Cause	Measures	Part position	Adjustment
	S ₂ : contact failure P ₁₄ (Brown) disconnection IC-3 4: disconnection	Replace shutter release button (0281)	J-3 K-3	

C. LEDs for metered SS do not light up Mode indication and exposure-adjustment LED (1/-) indication are normal.

Check items	Cause	Measures	Part position	Adjustment
	R ₁₁ : disconnection IC-3 4: disconnection IC-4 3: disconnection		B-6	

D. Mode indicators (A, M) do not light up

Check items	Cause	Measures	Part position	Adjustment
	R ₁ : disconnection		B-7	

E. No LEDs light with touch switch of MD-1 ON

Check items	Cause	Measures	Part position	Adjustment
	W ₁ : contact failure P ₁ (Brown): disconnection	Clean W ₁ contact, or replace connecting P.C. board.	A-3 D-6	

F. One of LEDs does not light up.

No lighting LED	Cause			Measures	Part position	Adjustment
	Joint	Pin No. of IC-4	Other			
▽	A	(8)				
	Disconnection	Disconnection				
I	B	(7)				
1/2	C	(6)				
1/4	D	(5)				
1/8	E	(4)				
1/15	F	(3)				
1/30	G	(2)				
1/60	H	(1)				
1/125	I	(10)				
1/250	J	(11)				
1/500	K	(12)				
1/1000	L	(13)				
△	M	(14)				
P	N	(15)	R ₉ : disconnection		A-6	
A	O	(16)				
M	P	(17)				
+/-	■	(18)	S ₂ : contact failure (See P. 39)	Clean and adjust contact bending.	C-9	
		(19)	ℓ ₉₋₁ (Black): disconnection		B-9	
			ℓ ₂₀ (Green): disconnection		D-9	
			R ₁₀ : disconnection		A-6	

② LEDs remain lighting.

A. LEDs remain ON with main switch (S₁) ON.

Check items	Cause	Measures	Part position	Adjustment
	ℓ ₇ (Brown) and GND: shortcircuit		D-6	
	ℓ ₂₀ (Brown) and GND: shortcircuit		K-3	
	S ₂ and GND: shortcircuit	Replace shutter release button (0281).	J-3	
	S ₁ and GND: shortcircuit (See P. 38)	Replace shutter speed dial base plate (0274).	J-3	

B. LEDs remain ON after touch switch (S₂) is ON. LEDs remain ON for 15 sec. after shutter release.

Check items	Cause	Measures	Part position	Adjustment
(LED lighting may not be held for 15 sec.)	C ₁₂ : disconnection		I-3	
	R ₇ : disconnection		I-3	

C. Exposure-adjustment LED (+/-) remains blinking with exposure-adjustment controller in "0" position.

Check items	Cause	Measures	Part position	Adjustment
	S ₂ : remains ON (See P. 39)	Bend contact to adjust.	C-9	
	ℓ ₂₀ (Green) and GND: shortcircuit		D-9	

③ With AEF 280PX used.

- A.** Mode indicator "P" does not light up. "60" LED (as FDC) does not blink, and flash fires fully in flash P mode.

Check items	Cause	Measures	Part position	Adjustment
	F ₁ : contact failure f ₁₆ (Gray) disconnection or shortcircuit with GND	Clean F ₁ .	K-8	

- B.** Mode indicator "P" does not light up in flash P mode.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ②: disconnection IC-4 ④: disconnection			

- C.** With flash fully charged, X-sync shutter speed does not change to 1/60 sec. automatically. (Metered SS LED remains ON. Flash fires with slower shutter speed than 1/60 sec.)

Check items	Cause	Measures	Part position	Adjustment
	F ₁ : contact failure f ₁₆ (White) disconnection, or shortcircuit with GND. IC-2 ②: disconnection IC-3 ③: disconnection IC-4 ④: disconnection	Clean F ₁ .	K-8	

④ Others.

- A.** Viewfinder LEDs light up with touch switch (S₂) ON, even with main switch (S₁) OFF.

Check items	Cause	Measures	Part position	Adjustment
	S ₁ : remains ON (bending of contact). (See P. 39)	Adjust contact bending.	M-6	

- B.** Over-range LED "Δ" blinks in A, P, M, B modes. Mode indication is normal.

Check items	Cause	Measures	Part position	Adjustment
	VR ₁ : contact failure Joint M: disconnection IC-4 ④: disconnection	Clean or Adjust contact bending. Replace flex P.C. board set (0401).	M-7	27 A

- C.** Viewfinder LEDs show about 1/2 EV slower shutter speed.

Check items	Cause	Measures	Part position	Adjustment
	f ₁₆ (Purple) and GND: shortcircuit f ₁₆ (Purple) and GND: shortcircuit		F-9 G-8	

D. Under-range LED "▽" blinks in A, M, B modes. LEDs show 1/4~1/8 shutter speeds in P mode.

Check items	Cause	Measures	Part position	Adjustment
	f_{22} (Blue): disconnection		E-2	

E. Under-range LED "▽" blinks in A, M, B modes. Normal in P mode.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ⑧: disconnection IC-4 ③: disconnection			

F. Mode indicator "M" lights up, operating as A mode with A mode setting.

Check items	Cause	Measures	Part position	Adjustment
	IC-1 ⑤: disconnection			

G. Under-range LED "▽" blinks in P mode. LEDs light properly or show slower shutter speed (about 1 EV) in A, M, B modes

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ⑤: disconnection IC-1 ⑤: disconnection			

H. Mode indicator "M" lights up, operating as P mode with P mode setting.

Check items	Cause	Measures	Part position	Adjustment
	IC-4 ③: disconnection			

I. Mode indicator "P" remains ON, not blinking, with setting other than minimum aperture in P mode.

Check items	Cause	Measures	Part position	Adjustment
	S_1 : contact failure (See P. 39) f_{16} (Green): disconnection IC-4 ③: disconnection	Clean or adjust contact.	F-3	25

J. Mode indicator "P" blinks with minimum aperture setting in P mode.

Check items	Cause	Measures	Part position	Adjustment
	S_1 : remains ON, or shortcircuit with GND. (See P. 39) f_{16} (Brown) and GND: shortcircuit	Adjust contact bending or MD lever position.	I-2 F-3	25

K. Mode indicator "P" remains ON, not blinking, with setting other than minimum aperture. Exposure-adjustment LED (+/-) does not light up. Metered SS LED does not change properly with ASA, aperture changing

Check items	Cause	Measures	Part position	Adjustment
	IC-3 ④: disconnection IC-4 ③: disconnection			

10. Operation failure using exclusive flash unit (AEF 280 PX)

A. Flash does not fire Shutter stays open. LEDs light properly.

Check items	Cause	Measures	Part position	Adjustment
Flash does not fire using neither sync terminal nor hot shoe	Sync terminal: cold soldering	Re-solder.	E-4	14
	P ₁₄ (Purple): disconnection			14
	S ₁₂ : defect (See P. 40)	Clean S ₁₂ , adjust contact bending	D-2	14
		Replace shutter (or X-contact plate 0207).	B	
Flash does not fire using sync terminal	Sync terminal: cold soldering	Re-solder.	H-4	14
	Sync terminal: defect	Replace sync terminal (2291).	H-4	14
Flash does not fire using hot shoe	Hot shoe (F ₁): contact failure	Clean F ₁	L-8	
	S ₁₁ : cannot be ON. (See P. 40)	Clean or adjust S ₁₁ .	L-8	
	P ₁₅ (Purple): disconnection		L-8	
Check if signal X-contact ON, is given on flex P.W. 34 See P. 40 for S ₁₂ check	Yes			
No	P ₁₅ (Purple): disconnection		H-6	

B. Flash does not fire Shutter stays open. Mode indicator and "60" LED (as FDC) blinks at 2 Hz with flash charged completely

Check items	Cause	Measures	Part position	Adjustment
	P ₁₂ (Black): disconnection		L-2	
	P ₂₆ (Black): disconnection		L-9	

C. Shutter operates without slit even though flash fires with "60" LED (as FDC) blinking.

Check items	Cause	Measures	Part position	Adjustment
	IC-1 (13): disconnection			

D. Always flash fires fully without blinking "60" LED (as FDC). (Time counter does not indicate normally long when checking strobe level.

Check items	Cause	Measures	Part position	Adjustment
	VR ₆ : contact failure	Adjust contact bending, or replace ASA resistor set (0249).	C-8	23
	P ₂ (Black): disconnection		G-9	
	SPC-B: defect	Replace light receptor (0584).	E-10	23
	P ₂₆ (Purple): disconnection or shortcircuit with GND.		D-8	
	P ₂₂ (Purple): disconnection		F-9	
	C ₂ : shortcircuit		H-7	
	C ₇ : defect	Replace C ₇ .	H-7	23
	IC-1 (13): disconnection			

E. Always flash fires fully without blinking "60" LED (as FDC). Aperture stops down to minimum, without mode indicator "P" lighting in flash P mode.

Check items	Cause	Measures	Part position	Adjustment
	F ₁ : contact failure f ₁₄ (Grey): disconnection or shortcircuit with GND IC-2 ⑩: disconnection	Clean F ₁ .	K-8	

F. Flash firing is extremely in short time. (Time counter indicates short.)

Check items	Cause	Measures	Part position	Adjustment
	C ₁ : disconnection SPC-B: shortcircuit R ₁₆ : disconnection R ₁₄ : the both ends are shortcircuited. IC-1 ⑩: disconnection IC-1 ⑪: disconnection IC-2 ⑩: disconnection	Replace light receptor set (0584). Re-solder.	H-7 E-10 H-8 C-8	23 23

G. "60" LED does not blink with flash fully charged. (Shutter speed does not change to 1/60 sec. automatically.)

Check items	Cause	Measures	Part position	Adjustment
Check if flash is fired with faster than 1/125 of metered SS indication in A and P modes.	No firing. → F ₁ : contact failure f ₁₄ (White): disconnection or shortcircuit with GND. IC-2 ⑩: disconnection IC-3 ⑩: disconnection	Clean F ₁ .	K-8	
	Fired → IC-4 ⑩: disconnection			

H. Always full aperture in flash P mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
Full aperture in P mode also.	SL-2: insufficient attraction	Replace magnetic release base plate (0534).	D-1	20
	R ₂₅ (VR ₂ on previous type flex board): disconnection IC-1 ⑩: disconnection IC-2 ⑩: disconnection		I-6	24

I. Aperture cannot be controlled properly in flash P mode. Viewfinder LEDs are normal.

Check items	Cause	Measures	Part position	Adjustment
	MD lever: irregular position S7-3, S7-2: contact failure (See P.40) f ₁₁ (Red): disconnection or shortcircuit with GND. f ₁₆ (Yellow): disconnection or shortcircuit with GND. IC-2 ⑩: disconnection IC-2 ⑪: disconnection	Clean and adjust contact.	I-2 E-3 F-2	25 25

J. "60" LED (as FDC) does not blink Always full aperture in flash P mode.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ②: disconnection			

K. Flash firing is not controlled correctly

Check items	Cause	Measures	Part position	Adjustment
	SPC-B: shutter operation failure	Adjust operation, or replace mirror box side plate (0521).		23
	SPC-B shutter: bouncing	Replace light receptor set (0584).		23
	F K-1 (Black): disconnection		F-10	

L. Flash fires but with slow sync in A, P, M modes.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ②: disconnection			

M. Flash firing is controlled automatically, blinking "60" LED (as FDC) in M mode.

Check items	Cause	Measures	Part position	Adjustment
	Joint ②: disconnection			

N. Mode indicator "P" does not indicate in flash P mode.

Check items	Cause	Measures	Part position	Adjustment
	IC-2 ②: disconnection			
	IC-4 ②: disconnection			

O. Flash unit is not charged.

Check items	Cause	Measures	Part position	Adjustment
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> Sync terminal is short-circuited even though lead wire of hot shoe on top cover </div> <div style="margin-top: 10px;"> No → Yes → </div>	Related hot shoe connection: shortcircuit			
	Top cover: isolation sheet is disengaged.	Install top cover isolation sheet (4256).		14
	F ₁ and F ₂ : shortcircuit	Re-solder.		
	Sync terminal: shortcircuit	Replace sync terminal (2291).	H-4	14
	S ₁₀ : shortcircuit (See P. 40)	Adjust X-contact bending, or replace X contact plate (0207)		14
	F ₄₅ (Purple) and GND: shortcircuit	Replace shutter.		B
	F ₄₅ (Purple) and GND: shortcircuit		H-6	
	F ₄₅ (Purple) and GND: shortcircuit		E-4	
	F ₄₅ (Purple) and GND: shortcircuit		L-8	

11. Operation failure using Motor Drive 1 (MD-1).

A. Shutter is not released by MD-1.

Check items	Cause	Measures	Part position	Adjustment
	W ₁ : contact or riveting failure	Clean W ₁ , or replace connecting P.C. board (0425).	A-3	
	f ₄₆ (Gray): disconnection		C-3	

B. No LEDs light when using MD-1.

Check items	Cause	Measures	Part position	Adjustment
	W ₁ : contact/riveting failure	Clean W ₁ , or replace connecting P.C. board (0425).	A-3	
	f ₇ (Brown): disconnection		D-6	
	IC-3 (D): disconnection			

C. Winding is impossible by MD-1.

Check items	Cause	Measures	Part position	Adjustment
LED 'Pilot Light' of MD 1 remains ON Yes No	Winder signal pin and riveted part of battery case GND: shortcircuit	Replace battery case base plate (0420).	K-1	
	Winder signal pin and f ₃₁ (Black): shortcircuit		D-2	
	W ₁ : contact/riveting failure f ₃₁ (Blue): disconnection, or shortcircuit with GND. IC-3 (D): disconnection	Clean W ₁ , or replace connecting P.C. board (0425).	A-3 D-7	

12. Operation failure using Multi Function Back (MFB).

A. Data is not imprinted.

Check items	Cause	Measures	Part position	Adjustment
Only for body with P.C. board C employed.	f ₃₆ (White): disconnection, or shortcircuit with GND.		E-7	
	IC-3 (B): disconnection			
	f ₄₂ (White): disconnection, or shortcircuit with GND.		G-7	
	f ₁₂₋₃ (Red): disconnection		G-7	
	Q ₁ : disconnection or defect	Re-solder or replace.	G-7	
	R ₂₇ : shortcircuit		G-7	
	R ₃₆ : disconnection		G-7	

B. Shutter is not released by MFB.

Check items	Cause	Measures	Part position	Adjustment
	f ₂₇ (Grey): disconnection		D-2	
	f ₄₆ (Grey): disconnection		D-2	

C. Shutter is released when returning film advance lever, with MFB using.

Check items	Cause	Measures	Part position	Adjustment
	f_2 (Grey) and f_1 (Black): Wrong soldering	Re-solder.	C- 2 D- 2	

D. Data is imprinted after 2nd shutter curtain travels completely.

Check items	Cause	Measures	Part position	Adjustment
	f_{21} (Blue) and f_{20} (White) on flex board: wrong soldering	Re-solder.	D- 7 E- 7	

E. Data is imprinted by changing main switch ON→OFF→ON slowly.

Check items	Cause	Measures	Part position	Adjustment
	Electrical circuit: misoperation	Employ P.C. board C (0407).	H- 7	

13. Leak current trouble.

Against troubles that camera works properly but battery power drains sharply, first check leak current as procedure on next page to judge camera condition.

A. Battery drains sharply. (Excessive leak current) Camera operation is normal.

Check items		Cause	Measures	Part position	Adjustment
With disconnection of P ₂₀ (Purple) by connecting P.C. board, leakage becomes normal.	Yes	C ₁₀ : polarity is wrongly connected. C ₁₀ : defect.	Re-install C ₁₀ correctly. Replace connecting P.C board (0425).	A- 2 A- 2	
No					
With disconnection of P ₁₀ (Orange) by connecting P.C. board, leakage becomes normal.	Yes	C ₈ : polarity is wrongly connected. C ₈ : defect.	Re-install C ₈ correctly. Replace C ₈ .	C- 7 C- 7	
No					
With disconnection of green lead wire of SL-3 by connecting P.C. board, leakage becomes normal.	Yes	C ₉ : Polarity is wrongly connected. C ₉ : defect	Re-install C ₉ correctly. Replace C ₉ .	B- 7 B- 7	
No		IC-5: defect	Replace IC-5. Replace flex P.C board set(0401)		A

• In case that camera does not work properly, find out cause according to defective symptoms other than current leakage.

• When checking current leakage, make sure that viewfinder LEDs should not be ON with touch switch OFF.

■ Checking procedure of leak current amount.

■ Standard

Main SW. (S_4)	Tolerance
. ON	$10\mu\text{A}$ or less
OFF	$2\mu\text{A}$ or less

■ Checking methods

Ⓐ When using Ampere meter (pico-or micro-ampere meter)

Ⓑ When using volt-meter

1. Connect camera and measuring instruments as shown in figure. Employ resistor ($10\text{K}\Omega$) whose rating is within $\pm 10\%$.

Caution: Camera cannot be operated under condition shown below.

2. Wait about 1 minute to read stable value when checking voltage.

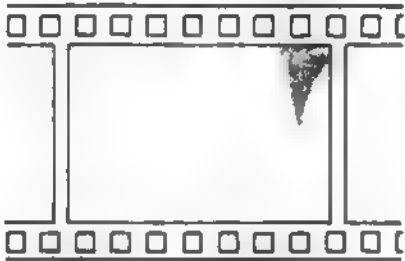

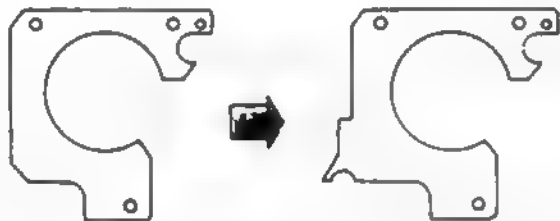

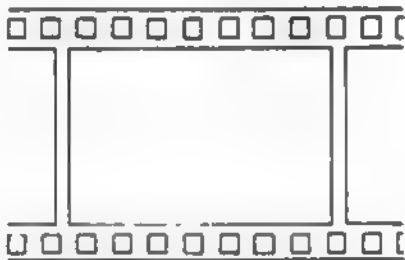

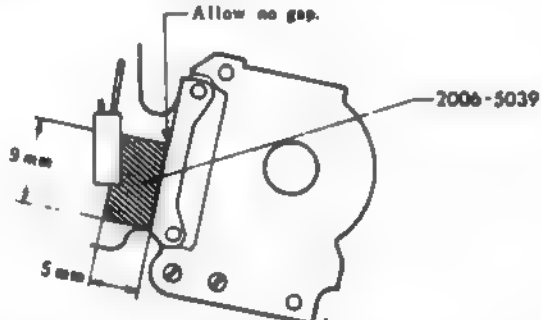

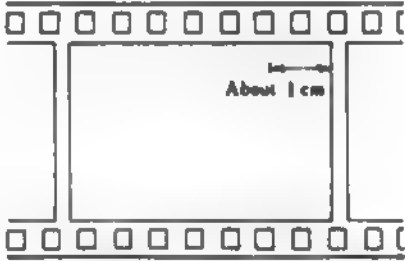

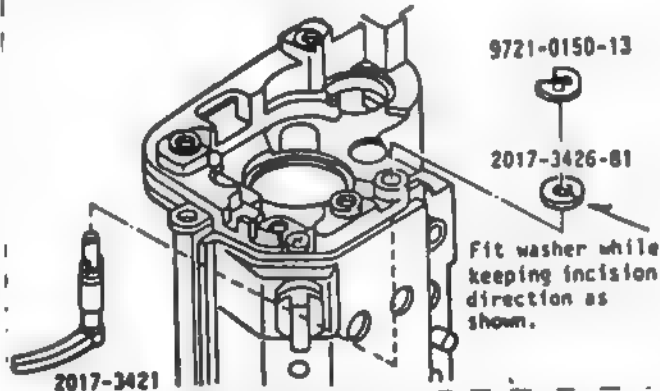

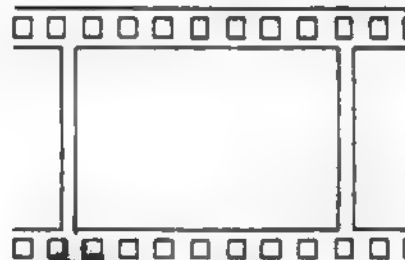

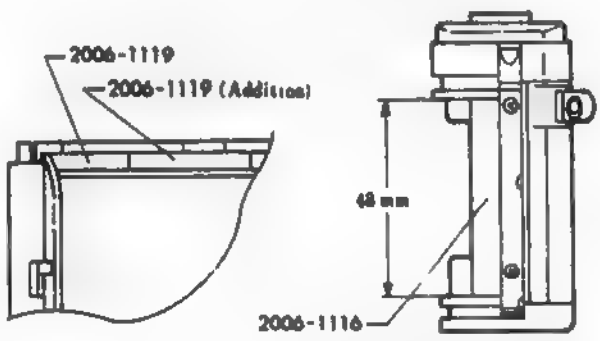

Obtain current consumption from voltage above by conversion table shown below.

Voltage	Current	Voltage	Current
10 mV	About $1\mu\text{A}$	100 mV	About $10\mu\text{A}$
30 mV	About $3\mu\text{A}$	200 mV	About $20\mu\text{A}$
50 mV	About $5\mu\text{A}$		

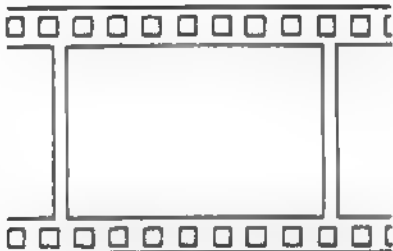

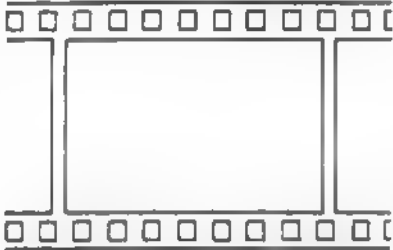

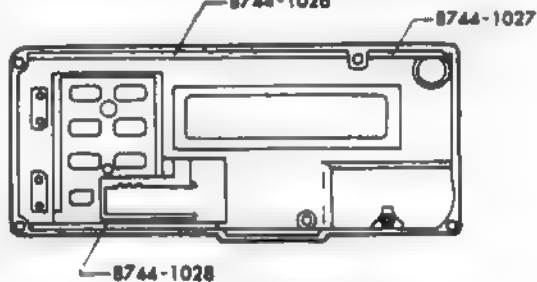

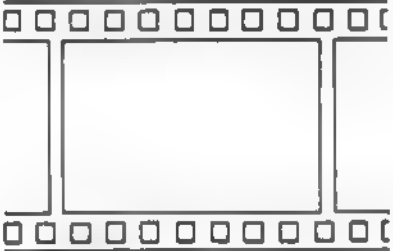

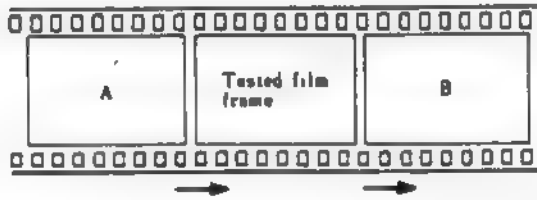

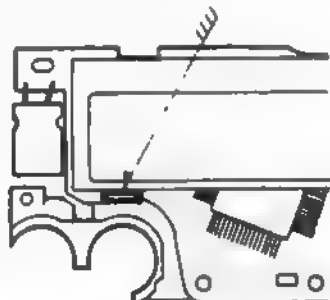

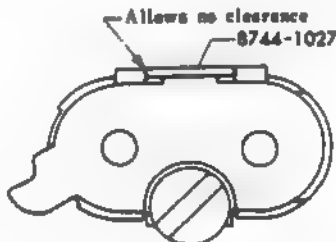

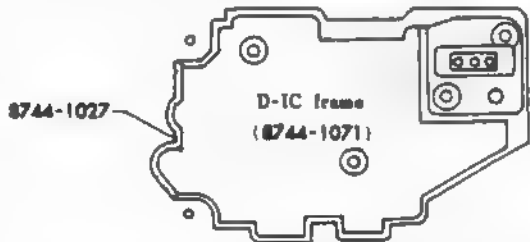

If touch switch is switched ON wrongly, operate main switch (S_4) ON—OFF—ON.

14. Light leakage

A. Light leakage in camera parts.

Symptoms	Measures
	<p>Replace Tv P.C. board holder (2017-4209) with 2017-4209-03.</p>  <p>2017-4209-02 2017-4209-03</p>
	<p>Remove main switch guide plate set (0412), and stick tape (2006-5039) as illustrated.</p>  <p>Allow no gap.</p> <p>9 mm</p> <p>5 mm</p> <p>2006-5039</p>
 <p>About 1cm</p> <p>• Reddish color on color slide film. (Light leakage occurrence after 25th picture frame.)</p>	<p>Make an incision with washer(2017-3426-81), and fit it on film indication filler(2017-3421).</p>  <p>9721-0150-13</p> <p>2017-3426-81</p> <p>Fit washer while keeping incision direction as shown.</p> <p>2017-3421</p>
	<p>① On back cover...Stick (addition) light-shield-sponge B (2017-1117).</p> <p>② On body.....Cut back-cover-light-shield-plate (2006-1116) to 48mm, and stick it.</p>  <p>2006-1119</p> <p>2006-1119 (Addition)</p> <p>48 mm</p> <p>2006-1116</p>

B. Light leakage in Multi Function Back.

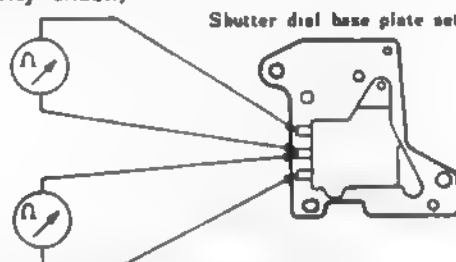

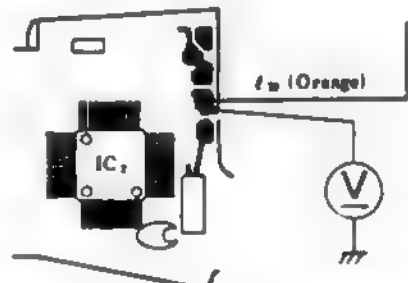

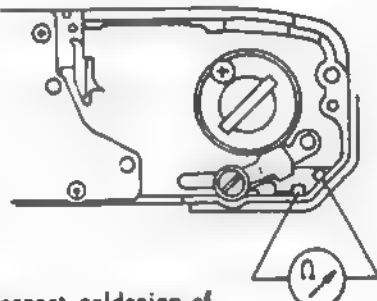

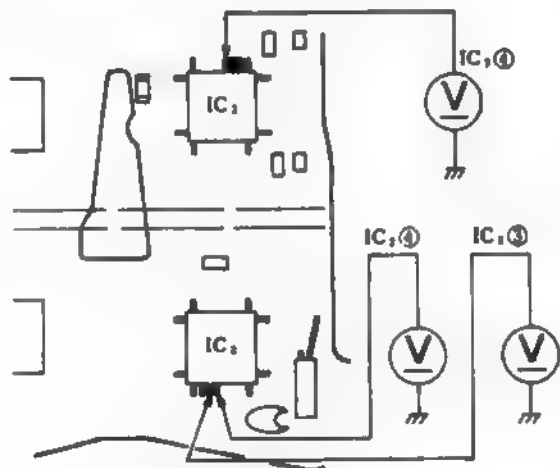

Symptoms	Measures
	<p>Check if tape (reverse side of flex P.C. board joint part) on LED P.C. board, is out of position.</p> 
	<p>Check if light shield sponges (8744-1026, 1027, 1028) of reverse side of outer case set (8744-0121), are out of position.</p> 
	<p>Light leakage left occurs without battery chamber cover set (8744-0125) used.</p>
<p>With light leakage test performed, film is exposed on the both frames, previous and next frames to tested frames, as illustrated. (For actual use, light leakage, A and B, may appear on single frame.)</p> 	<p>Measures against light leakage B (①, ②)</p> <p>① Cut light shield sponge (2006-1116) to make 7mm length, and stick it on the hole shown by arrow.</p>  <p>② Cut light shield sponge (8744-1027) to make 8mm length, and stick it between battery chamber cover set claws.</p> 
<p>Measures against light leakage A</p> <p>Cut light shield sponge (8744-1027) to make 28mm length, and stick it in clearance between D-IC frame and back cover.</p> 	

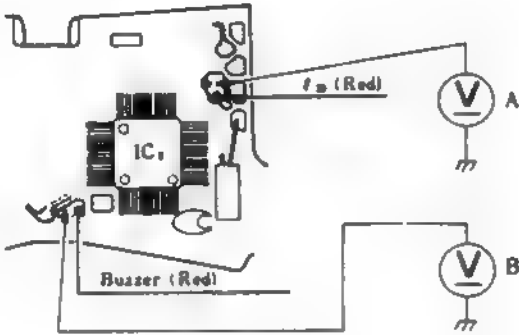

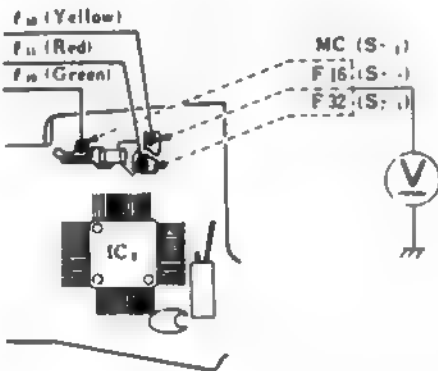

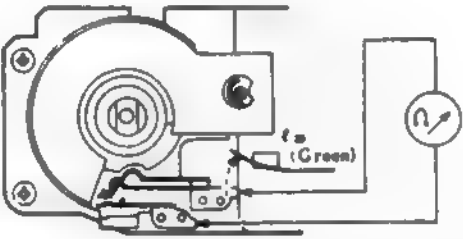

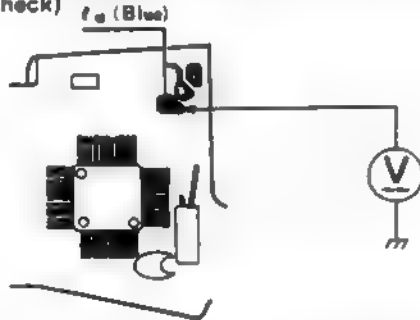

3 Checking procedure of switches, magnets.

1. Switch.

• Conditions to obtain following voltages: — end is connected with GND.

Main switch (S_0) and metering switch (S_2 or S_1) are ON position.

	Checking procedure	Judgement																				
S ₀	(Conductivity check)  Note Be sure to disconnect soldering of f ₂₀ (Brown), f ₂₁ (Green), f ₂₂ (Grey).	Should be following <table><tr><td>S₀</td><td>ON when depressing operating button slightly</td></tr><tr><td>S₁</td><td>ON when depressing operating button all the way down</td></tr></table>	S ₀	ON when depressing operating button slightly	S ₁	ON when depressing operating button all the way down																
S ₀	ON when depressing operating button slightly																					
S ₁	ON when depressing operating button all the way down																					
S ₁	(Voltage check)  Note: f ₂₀ (Orange) should be free from disconnection, cold soldering.	Should be following <table><tr><td>Winding completion</td><td>Less than 0.5 V*</td></tr><tr><td>Shutter released</td><td>About 2.9 V</td></tr></table> *In case of more than 0.5 V, leading to no shutter releasing.	Winding completion	Less than 0.5 V*	Shutter released	About 2.9 V																
Winding completion	Less than 0.5 V*																					
Shutter released	About 2.9 V																					
S ₂	(Conductivity check)  Note: Be sure to disconnect soldering of f ₂₁ (Black), f ₂₂ (Yellow).	Should be following <table><tr><td>Winding completion</td><td>OFF</td></tr><tr><td>Shutter released</td><td>ON</td></tr></table>	Winding completion	OFF	Shutter released	ON																
Winding completion	OFF																					
Shutter released	ON																					
S ₃	(Voltage check) 	Should be following <table><tr><th>Mode/shutter speed selector</th><th>IC₁③ (S₁₋₂)</th><th>IC₂④ (S₁₋₁)</th><th>IC₃④ (S₁₋₁)</th></tr><tr><td>P</td><td>0 V</td><td>1.0 V</td><td>2.9 V</td></tr><tr><td>A</td><td>1.0 V</td><td>0 V</td><td>2.9 V</td></tr><tr><td>1 ~ 1000</td><td>1.0 V</td><td>1.0 V</td><td>2.9 V</td></tr><tr><td>B</td><td>1.0 V</td><td>1.0 V</td><td>0 V</td></tr></table>	Mode/shutter speed selector	IC ₁ ③ (S ₁₋₂)	IC ₂ ④ (S ₁₋₁)	IC ₃ ④ (S ₁₋₁)	P	0 V	1.0 V	2.9 V	A	1.0 V	0 V	2.9 V	1 ~ 1000	1.0 V	1.0 V	2.9 V	B	1.0 V	1.0 V	0 V
Mode/shutter speed selector	IC ₁ ③ (S ₁₋₂)	IC ₂ ④ (S ₁₋₁)	IC ₃ ④ (S ₁₋₁)																			
P	0 V	1.0 V	2.9 V

	About 2.9V at OFF position																							

(Conductivity check)

S₁₁

Reverse side of hot shoe

Should be following

Hot shoe

ON with flash mounted

OFF with no flash mounted

(Conductivity check)

S₁₂

Note: f_{13} , f_{14} (Purple) should be free from disconnection, cold soldering.

Should be following

ON while shutter open

OFF after 2nd shutter curtain travel

(Conductivity check)

S₁₃

Note: Be sure to disconnect soldering of f_{17} (Grey).
: f_{17} (Grey), f_{18} (Black) should be free from disconnection, cold soldering.

Should be following

Remote control terminal

ON with short-circuited

(Conductivity check)

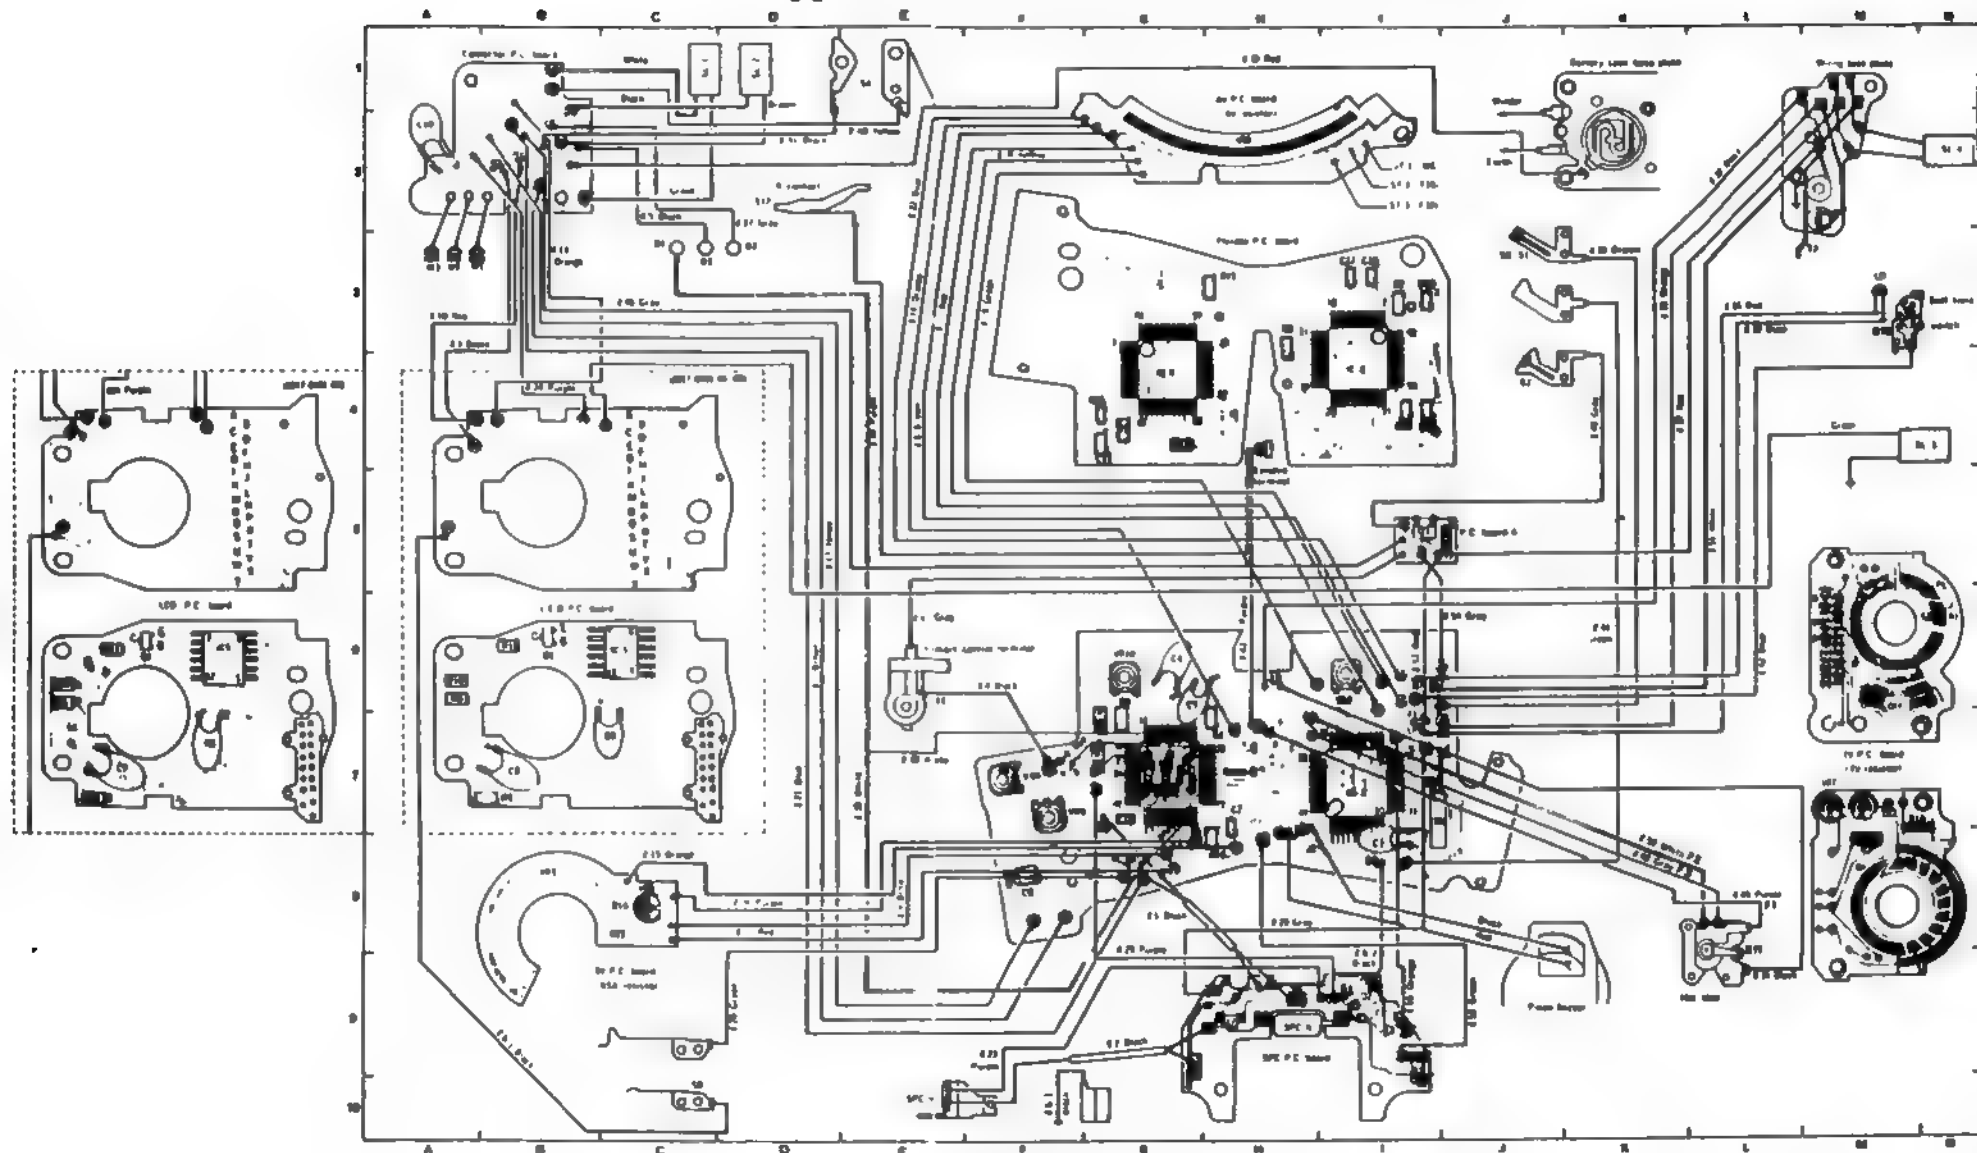

S₁₄

Note: Be sure to disconnect soldering of f_{19} (Yellow).
: f_{19} (Yellow) should be free from disconnection, cold soldering.

Should be following

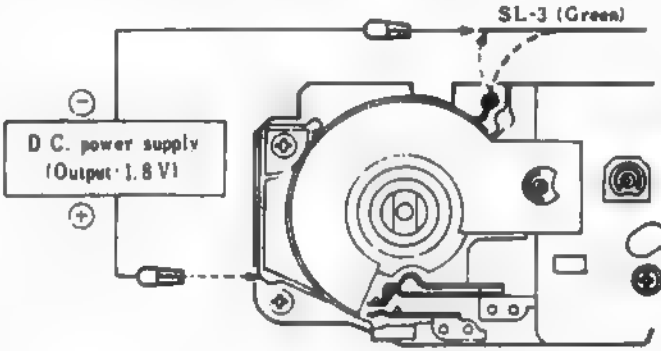

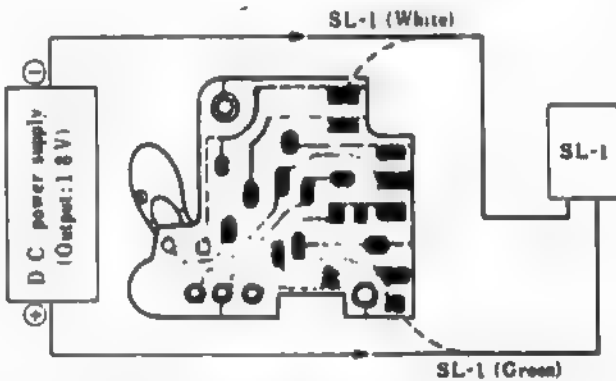

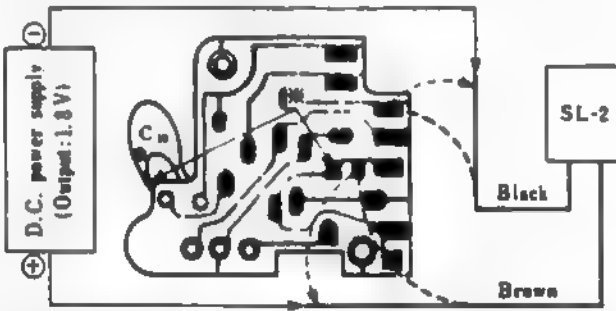

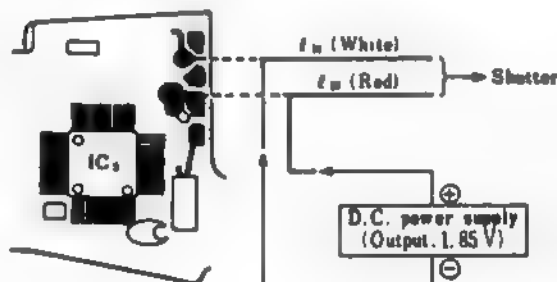

ON with self-timer switch pressed down

OFF without self-timer switch pressing

2. Magnet.

- Replace magnet with new one in case that state of camera is out of description in Judgement column even though lead wires, magnet coil, attraction surface have no problem.

	Checking procedure	Judgement
SL-3	<p>Disconnect SL-3 lead wire (Green), connect it to \rightarrow end of D.C. power supply (output: 1.8 V).</p> 	Shutter releasing, when contacting \rightarrow end of D.C. power supply to GND as shown in left figure after winding completion, means O.K.
SL-1	<p>Be sure to disconnect soldering of SL-1 lead wire (White, Green), connect it to D.C. power supply (output: 1.8 V) with power supply switched OFF.</p> 	Preset lever should operate with D.C. power supply switched ON after winding completion.
SL-2	<p>Be sure to disconnect soldering of SL-2 lead wire (Black, Brown), connect it to D.C. power supply (output: 1.8 V) with power supply switched OFF.</p> 	<ol style="list-style-type: none"> 1. After winding completion, make short-circuit at marked (*) position as shown in left figure using tweezers so that SL-1 is separated. 2. When you could hear clicking sound with D.C. power supply switched ON, SL-2 should be separated.
SL-4	<p>Be sure to disconnect solderings of ℓ_{27} (Red), ℓ_{31} (White), connect those to D.C. power supply (output: 1.85 V).</p> 	<ol style="list-style-type: none"> 1. Release shutter after D.C. power supply switched ON. 2. Shutter should remain open until D.C. power supply switched OFF.

4 Switches function

Symbol	Name of switch	Function	Operating condition
S ₀	Sensor switch (Touch switch)	Turns on the metering calculation circuit and indicates the shutter speed in viewfinder.	ON when shutter button is touched with finger.
S ₁	Metering switch	Same as S ₀ .	ON when shutter button is depressed.
S ₂	Release switch	Starts the operation of each circuit.	
S ₃	Trigger switch	Starts counting of exposure time at OFF.	OFF immediately after shutter operation starts.
S ₄	Reset switch	<ul style="list-style-type: none"> Prevention of faulty operation during winding. Circuit resetting. Motor drive control. 	OFF with winding completed; ON with preset system reset after 2nd curtain running.
S ₅	Mode switch	<ul style="list-style-type: none"> A, M, P, B mode selecting. M, A, P LED ON selecting. 	Circuit changes by mode/shutter speed selector.
S ₆	Main switch	Circuit power ON/OFF; ON + piezo-beeper power supply	Main switch position indicator operation.
S ₇	MD switch	Delivers MD signal to camera.	Interlocked with MD coupler of MD lens.
S ₈	+/- indication switch	Delivers exposure adjustment signal.	ON with exposure adjustment control.
S ₁₀	Self switch	Makes self-timer circuit ready for operation.	ON with self lever raised.
S ₁₁	Electric shock prevention switch	Electric shock prevention during use of synchro terminal.	ON with flash unit fitted on acc. shoe.
S ₁₂	X contact	Flash operation.	ON with 1st curtain traveling completed; OFF with 2nd curtain traveling completed.
S ₁₃	Remote control switch	Same as S ₂ .	—
S ₁₄	AE lock switch	Aperture level and indication are held in A and P modes.	It also serves as a self-timer lever and turns ON when pressed down.

5 IC Pin Voltages (Measured value)

Measuring conditions: Value in bellow shows actual measured Voltage(V), with 3V power supply, at f:5.6 with 50/F 1.4 lens used, under the normal room condition.
(Digital multi-meter (Type 2508) used.)

F means no voltage that can't be measured. (Indicated values flucturate.)
